Godfrey Village Hall
6810 Godfrey Road,
Godfrey, IL

5/26 Thursday, 7pm
Godfrey Village Hall
6810 Godfrey Road,
Godfrey, IL

About Godfrey Climate Protection and Energy Efficiency Committee

The Godfrey Climate Protection and Energy Efficiency Committee's mission is to engage diverse village stakeholders with the goals of improving energy efficiency in municipal operations, protecting the environment and natural systems, and, as a consequence, enhancing quality of life in the village. The committee will also educate the public about energy efficiency and climate change while championing this process.

The Village of Godfrey does not endorse or sponsor Straightup Solar, LLC., and the decision whether or not to contract with Straightup Solar, LLC. for installation services is strictly the decision of the resident or business owner within the Village of Godfrey. The Village has not and does not endorse any solar energy program within the Village. The Village supports all efforts to provide green energy initiatives within our community; however, it is responsibility of the resident or business contracting with a particular vendor of green energy products and services to complete the necessary due diligence and legal contractual protections deemed necessary by each resident or business

Solarize Godfrey

How Does a Solar Group Buy Work?

A community solar group buy empowers home and business owners to go solar by providing free public education about solar energy and offering a pre-negotiated low solar bulk purchase price on installations.

Reduced Price: A group buy saves costs as a result of the installer bulk purchasing solar panels and equipment. The more residents participate, the lower the cost will be for everyone. The price is also reduced because education & customer development is done early in the process, which saves the installer time & money.

Education: Solar group buys help neighbors decide where to start, how to evaluate an offer, what to budget, and who to hire. We provide educational sessions on details of the technology and the program. We provide free community sessions to learn more about solar, costs, and how the group-buy program works.

Installer Selected: An advisory team selected an installer to ensure quality work at a low cost to customers. The installer was selected based on criteria important to the community, like certification, level of experience, and cost.

Enrollment: Interested participants will receive a free site assessment from the selected installer. After receiving the free cost estimate, the customer will decide whether or not to move forward with the solar installation.
