

Parking Restrictions

(continued)

- Crews will work on several streets each day, so they may not arrive on your street until late in the morning. Please do not park on the street if work hasn't begun at 7 AM.
- Please do not water your lawn on the indicated dates or allow water to run into the street as this may delay the curing process.

Please do not walk, run, play, or ride your bike on the street and avoid street crossings until the pavement has been opened to traffic.

MICROSURFACING
PROJECT

What is Microsurfacing?

Microsurfacing is a protective seal coat which extends the life of pavement. It is a thin, tough layer of asphalt emulsion blended with finely crushed stone for traction. This is a cost-effective method to renew the road surface and seal minor cracks and other irregularities.

What to expect when it's finished

You'll notice that the finished appearance differs slightly from traditional asphalt paving which is black and smooth; by contrast, micro-surfacing results in a gravelly-textured brown/black finish. Over a period of three to four weeks the material settles to closer resemble streets with a basic asphalt finish. For the first several weeks after the material has been applied, you may notice some of the crushed rock aggregate will become loose. This is part of the curing process and can be expected with micro-surfacing. A street sweeper will remove the loose rock after a few weeks.

We will re-open the street when it's ready to sustain traffic. Please do not attempt to drive or walk on it before then or you may damage the finished product as well as your vehicle or shoes.

Parking Restrictions

- "No-Parking" signs will be placed on the street at least 48-hours in advance of work.
- Parking restrictions may go into effect as early as 7 AM. Please see the posted date(s) on the signs for exact parking restrictions. Emergency vehicles (fire trucks, ambulances, and police cars) will still have access to the street.
- Cars parked on the street during work hours will need to be moved or towed to complete the work.
- To minimize any impacts to you or construction, please avoid using the street until it has been opened to traffic. The street will be opened once the material can sustain traffic.
