Area of Responsibility:			

Introduction

In 2003, Madison County (County), Illinois, and its communities created a Co-Permittee Group to join forces in complying with the National Pollutant Discharge Elimination System (NPDES) for Municipal Separate Storm Sewer Systems (MS4) Phase II requirements. As stated in the original 2003 Notice of Intent (NOI), the County and the Co-Permittee communities were to pool resources and work together to comply with the commitments made within the NOI for the benefit of all within the County.

The Co-Permittee Group was active during this reporting period. Significant progress was made sharing Best Management Practices (BMPs) for document retention, outfall mapping, operation procedures, and maintenance activities.

Best Management Practice (BMP) Summary of 2022-2023 Activities

In 2003, each member of the Co-Permittee Group submitted a NOI in compliance with the first 5-year cycle. In 2008, a NOI was submitted in compliance with the next 5-year cycle, as written in the first MS4 permit. The 2009 NOI was submitted in compliance with additional requirements of the Illinois Environmental Protection Agency (IEPA) in the second MS4 permit. Each community submitted an NOI in 2016 when the General Storm Water Permit for MS4s was reissued. As stated in the 2003, 2008, 2009, and 2016 NOI, each Co-Permittee Member identified certain activities to comply with the Phase II requirements. Below is an abbreviated summary of the BMPs that were written in the NOI for each of the minimum control measures.

March 2022-March 2023:

- 1) **A.1-** Brochures incorporating green infrastructure and other related BMPs were to be published and displayed by each community in a public place, or on the community website, if applicable.
- 2) **A.4-** Madison County sponsored and participated in water-quality public events.
- 3) **A.5** Madison County participates in educational programs, including involvement in the Green Schools Program.
- 4) **A.6-** Madison County provides a regular Newsletter which promotes and highlights water quality events.
- 5) **B.4-** Each community is to provide a minimum of (1) public meeting annually for the public to provide input as to the adequacy of the permittee's MS4 program.
- 6) **B.6-** The Co-Permittee group met (4) times throughout the year to provide training and updates on various topics.
- 7) **B.7-** Each community was made aware of County sponsored events. Madison County was responsible for program development and coordination. Other Community involvement includes Stormwater Management, Watershed Plans, Recycling and Resource Management.

Page 2

- 8) **C.1-** Communities were to review outfall map completeness and update revised or new storm sewer systems.
- 9) C.2- Revisions to existing illicit discharge ordinances have been delayed until completion of the County Stormwater Master Plan. Madison County is working with the Stormwater Commission to prepare a Master Plan for the County. The Master Plan is currently in development.
- 10) C.5- Communities reviewed the inlet stenciling program. Standards for inlet stencils were available to the Co-Permittee Group upon request. The County is working to assist communities with resources to complete their inlet stenciling program as well as auditing the condition of existing markings.
- 11) C.7- Communities were to conduct illicit discharge inspections of facilities and outfall points. Illicit discharge detection training was included during (1) quarterly meeting.
- 12) **D.1, D.4, E.3, E.4-** Revisions to construction and post-construction stormwater ordinances have been delayed until the completion of the County Stormwater Master Plan. Training was provided on understanding, interpreting, and enforcing stormwater ordinances in place at this time.
- 13) **D.2-** Madison County provided Erosion and Sediment Control BMP training at (1) quarterly meeting.
- 14) **D.5-** Madison County continued to maintain a stormwater hotline number to address public concerns related to stormwater issues.
- 15) **D.6, E.5-** The County provided continuing education opportunities for Co-Permittee members.
- 16) **E.6** Madison County Highway Department routinely inspects creeks, ditches, and drainageways for debris and siltation and remove accumulated debris.
- 17) **F.1-** Madison County provided Operations Training as part of continuing education at (1) quarterly meeting.
- 18) **F.2-** Madison County will implement a maintenance program, inspect facility BMPs annually, and maintain records of inspections.
- 19) **F.3-** Communities are to review and update O&M manuals annually.
- 20) F.5- Madison County has continued to work towards a county-wide Stormwater Master Plan

The following pages highlight any changes made to the BMPs from the NOI, BMP status, and activities planned for the next reporting year. Additional information is also provided from the County and each Community.

IEPA Annual Report for Stormwater Discharges from MS4 Communities- Period: March 2022 through March 2023

ADDITIONAL INFORMATION

BMP A.4 Water Quality Oriented Public Events - Water Festival

Water Festival. See attached Exhibit A.4-A for additional details.

Water Quality Oriented Public Events - Mississippi Earthtones Festival

Was held on September 17, 2022 - Madison County set up a booth / Village of Godfrey is a sponsor. See attached Exhibit A.4-B for additional details.

BMP A.5 | Classroom Educational Materials - Madison County Soil and Water District

The Madison County Soil and Water Conservation District assists with the educational requirements through a number of initiatives. They provide historic aerial maps, flood maps, topography maps, soil type maps, and other data resources. These resources are used by students, developers, environmental and engineering firms, and individuals. The Soil Survey for Madison County was digitized in 2002 and is now available at no cost. Each year, the Soil and Water District provides monetary awards to the best conservation 4-H project at the Madison County Fair. This has allowed school aged children to learn different methods of conservation and how it could potentially benefit stormwater quality and quantity.

The Madison County Soil and Water District also supplies literature to schools and organizations for Earth Day and Arbor Day. The literature includes themes such as conservation and stormwater. Through funding from the Madison County Farm Bureau, the University of Illinois Extension Office, and the Madison County Soil and Water District, an educational coordinator works to deliver presentations and supply schools with literature related to stormwater pollution.

BMP A.5 | Classroom Educational Materials - Madison County Green Schools Program

Madison County schools operate a Green Schools program which educates children about the need to recycle and explore "greener" options in many facets of their lives, as well as operating large scale recycling programs. See attached Exhibit A.5-A for additional details.

BMP A.6 Other Public Education - Make Available A Regular Newsletter Promoting Water Quality Events

Madison County provides a regular Newsletter which promotes and highlights water quality events. Quarterly Meeting Newsletters are distributed to Madison County MS4 Program members for their use. See attached Exhibit A.6-A for additional details.

BMP B.6 | Stakeholder Meetings - Co-Permittee Group Training Opportunities

The Madison County MS4 Co-Permittee Group held four quarterly training meetings during the 2022-2023 permit year. Topics covered included a review of proposed changes to Phase II requirements in the MS4 permit cycle, sediment & erosion control, post construction stormwater management, outfall mapping, illicit discharge detection and elimination, operations training, and annual report requirements. Members were issued Certificates of Attendance. See attached Exhibit B.6-A and Exhibit B.6-B for additional details.

BMP B.7 | Community Events

Throughout the year, Madison County sponsored many community events that could positively impact stormwater quality. These activities encourage public participation to prevent pollutants from getting into the sanitary and storm sewer system.

The pharmaceutical drop-off program included twelve police departments in the County plus the Madison County Sheriff's Department where citizens could dispose of expired or unwanted medication year round properly rather than flushing down the drain or dumping into landfills. See attached Exhibit B.7-A for additional details.

Madison County managed a Christmas Tree recycling program in conjunction with area public works and township highway departments from late December 2022 to mid January 2023. There were different locations open to the public that collected Christmas trees. The trees were chipped for mulch and used by public works departments for parks or in ponds for fish bedding. See attached Exhibit B.7-B for additional details.

BMP B.7 | Community Events

Madison County "Planning and Development" sponsored electronic waste collections on March 12th, June 18th, September 17th, and October 22nd, 2022 where residents could bring home electronics, computer towers, laptops, servers, fax machines, and other electronic items for free disposal. See attached Exhibit B.7-C for additional details.

Madison County Sponsored a tire recycling collection in October 2022 with a total of 71 tons collected and recycled. See attached Exhibit B.7-D for additional details.

Madison County sponsored Household Hazardous Waste collections monthly, every 1st Saturday and 3rd Friday where Illinois residents could bring paints, gas, oils, degreasers, fluorescent bulbs, and other household hazardous waste items for free disposal. See attached Exhibit B.7-E for additional details.

Madison County sponsored a "Clean Communities Litter Program" and distributed over 1,600 resource kits to residents each including a safety vest, litter grabber, gloves, and trash bags. The County along with IEPA also sponsored a "Bulk Item Cleanup" and collected 15 large roll off dumpsters full of bulk waste. See attached B.7-F for additional details.

BMP B.7 Other Public Involvement

Madison County adopted ORDINANCE AUTHORIZING THE MADISON COUNTY FLOOD DAMAGE PREVENTION ORDINANCE. Madison County hosted Updated Flood Map Open Houses on January 18th in Granite City and on January 19th in Wood River. Madison County, along with Heartland Conservancy, provided various events to help educate the County on watershed plans and how they reduce flooding and improve water quality throughout the County. Major components of the events include watershed resource inventories of existing conditions, watershed based plans for improvements, and public/stakeholder involvement. See attached Exhibit B.7-G for additional details.

Madison County provides a Recycling and Resource Management Program. Madison County provides updates at Quarterly Meetings regarding sponsored Recycling Campaigns, a Clean Communities Program, Bulk Item Cleanups, and announced that 3 of the 11 Environmental Grant Projects have been completed. See attached Exhibit B.7-H for additional information.

Madison County is actively involved in groups and organizations that are connected with MS4. See attached Exhibit B.7-I for more details.

BMP D.2 Erosion and Sediment Control BMP's

Erosion and Sediment Control BMP training was provided during the June 8, 2022 quaterly meeting. See attached Exhibit D.2-A for additional details.

BMP D.6/E.5

Training for Construction Site Inspectors

At the December 14, 2022 co-permittee group quarterly meeting, Madison County provided a training workshop for construction site inspectors. A presentation was provided by professional staff regarding "Construction Site Sediment and Erosion Control", also providing resources for construction site inspectors, as well as information regarding IEPA's Stormwater Phase II Final Rule for Post-Construction Runoff Control Minimum Control Measure. See attached Exhibit D.6/E.5-A for additional details.

BMP F.1 | Employee Training Program

Madison County attended the 2023 Illinois Association for Floodplain and Stormwater Management Annual Conference on March 14th and 15th, 2023. See attached Exhibit F.1-A for additional details.

ADDITIONAL COMMUNITY ACTIVITIES

Community Name: Village of Godfrey Permit #: ILR400160

List any additional community-sponsored activities performed between March 2022 and March 2023 not listed in *Notice of Intent (NOI)* submittal, but which addresses one of the six minimum control measures:

- The Village provides curb side recycling through (3) licensed collectors-Residents contract directly with the Collector they choose. The Village's website was updated with curbside recycling requirements and links to the Madison County website. Paper recycling and aluminum can collection is encouraged at Village Hall and they provide a drop-off site for aluminum cans at the Village Hall.
- The Village participated in (4) electronic waste collection drives for Madison County residents at CJD in Edwardsville.
- The Village maintains five (5) 4 cubic yard dumpsters at the Public Works Facilities, Herter Industrial, Village Hall, and 2 at the Park Maintenance Building, which are all emptied weekly.
- The Village cleaned 700 feet of ditch collecting 14 truckloads (112 tons) of debris and disposed of at the Village dump..
- The Village spent 1,588.41 hours of sweeping 120.3 miles of roadways collecting 40 truckloads (321 tons) of debris and disposed of at the Village dump.
- The Village of Godfrey Parks Department planted over 53 trees over the last year. Some are for future Memorial Tree Dedications in the Village's five parks.
- The Village cleaned a total of 8 catch basins this reporting year.
- The Village participated in the Madison County Used Tire Collection Program on October 6th & 7th, 2022 dropping off 56 used tires.
- The Village participated in the Madison County Prescription Drug Take Back Day on October 29, 2022.
- The Village participated in the Lewis & Clark Community College E-Waste Drive on November 4th & 5th, 2022.
- The Village participated in the Madison County Permanent Household Hazardous Waste Site – 2 times a month starting November, 2021 in Wood River.
- The Village implemented a Christmas Tree Recycling Program with (1) drop-off location at 6212 Godfrey Road-Godfrey's Public Works Department collecting (49) Christmas Trees from December 26, 2022 to January 14, 2023.
- The Village encouraged participation in Madison County's Pharmaceutical Collection providing information regarding drop-off locations – ISP District headquarters in Collinsville, Local - Alton, Wood River and Bethalto.

Additional Activities

Pre-Construction Site Plan Review

• The Village of Godfrey Parks Department planted over 53 Trees over the last year. Some are for future Memorial Tree dedications in the Village's five Parks.

Pre-Construction Site Plan Review

- BJC Medical Offices in Godfrey: Revised Plans for review by Scout Capital Group on September 2, 2022
- Godfrey Fire Protection District New Fire House: Site Plan for review by Millennia on October 11, 2022
- Scooter's Coffee: Resubmitted site plan for review by TWM on October 27,2022
- Illinois American Water Operations Center: Resubmitted site plan by Plocher Construction for review on November 2, 2022
- Eclipse Car Wash Resubmitted Site Plan for review by SMS on September 15, 2022, October 20, 2022, and January 6, 2023

IEPA NPDES MS4 Permit Inspection

On March 29, 2022 Wayne Caughman of the IEPA conducted a visit to the Village of Godfrey's entities to ascertain compliance with our NPDES MS4 permit requirements. Along with Mr. Caughman, Steve Brendel of Madison County met with Village Engineer Rich Beran, Village Engineer Technician John Uhl and Director of Maintenance Jim Lewis. Visual inspection was made on both of the Public Works facilities and the Parks Maintenance complex.

Events

16th Annual Mississippi Earthtones Festival on Broadway in Alton, Illinois - September 17, 2022 is organized by the Alton Main Street and the Sierra Club. It is a celebration of the river through art, music and conservation. This year's theme was "Amplify the River" local artists were commissioned to build large installations that enhanced the festival grounds. A variety of fun and educational activities was planned for families at the event. Along with local food and beverages were on site. There were two entertainment stages where wind-powered music filled the air throughout the day. The Mississippi Earthtones Festival (MEF) also had a River Clean-up that took place on Saturday, September 24, 2022. Boats ferry volunteers to clean up riverbanks and islands from 9 am to noon. Approximately 45 tons of trash has been removed and has recycled 10 tons of materials from the Mississippi River during the MEF clean-ups to date, with more than 20,000 volunteer hours contributed so far.

Riverbend Earth Day Fest – The Riverbend Earth Day Fest held on April 30, 2022, attracted group of Eco-Friendly groups, Artists, Vendors & Visitors. The event for the past four years has been hosted by the Old Bakery Beer, because it seems to rain every year and the event can be held inside at the Old Bakery Beer.

Lewis & Clark Community College's 20th Annual Water Festival – The 20th Annual Water Festival was held on Friday, September 30, 2022, at the Lewis & Clark Community College's Godfrey campus. Nine regional fifth-grade classes explored interactive booths focusing on the importance of water. Since 2002, more than 13,000 students and 150 teachers from 42 schools in about a dozen counties and two states have participated in the Water Festival. The Water Festival, which began as the Water Stewardship Project, was created after discovering a lack of water stewardship education, specifically in elementary schools and as a way to connect students to water, their local environment, and organizations that help conserve the environment. This year, 29 stations were set up and classes rotated from station to station during the five-hour long event. From nature hikes to canoe rides, students enjoyed soaking up the knowledge and entertainment. There was a teacher workshop, which took place on Monday, September 26, 2022, which provided the teachers with curricular materials, supplies and the teaching methodology to introduce water education to their students. This year's workshop focused on the Swarovski Waterschool program and Project WET (Water Education Today).

Illinois RiverWatch - With winter approaching, Illinois RiverWatch is hoping to train community members to monitor for chloride levels in local streams to identify areas where salt use is impacting water quality. Illinois RiverWatch are seeking volunteers who are willing to check on their local streams several times between October and May. The training is held virtually on October 26, 2022 from 7:00 p.m. to 8:00 p.m. and on November 14, 2022 from 7:00 p.m. to 8:00 p.m. The RiverWatch staff will provide participants with the information needed to become a Winter Chloride Watcher.

Village of Godfrey - Development Plan Regulations Ordinance (previously the Stormwater & Fill Ordinance) – Review and Update

The Village of Godfrey has updated its Site Development Plan. The Village has looked at (Draft 10-20-21) Madison County's Site Development Regulations Ordinance, the States new Bulletin 75, and other resources for new and updated requirements. The Village of Godfrey's Board of Trustees on April 5, 2022 gave Consideration & Approval and Ordinance 09-2022 was passed.

Stormwater Best Management Practices – A Guide for Residents – On September 20, 2022, the Village Board of Trustee approved adding the Stormwater Best Management Practices – A Guide for Residents to the Village's website and to provide some hardcopies at the Village Hall for public information. The Guide is 13 pages that detail some of the most common best management practices that can be implemented at the homeowner level.

Madison County Updated Flood Map Open Houses – Updated Preliminary Flood Insurance Rate Maps are being released for Madison County. There were two In-Person Open Houses. First was on January 18, 2023 from 5:30 p.m. to 7:30 p.m. at the Granite City Township Hall at 2060 Delmar Ave. in Granite City, IL 62040. The second open house was on January 19, 2023 from 5:30 p.m. to 7:30 p.m. at the Wood River Public Library at 326 E. Ferguson Ave. in Wood River, IL 62095. The Village Engineer and one Village Trustee attended the January 19, 2023 meeting.

Adopt-A-Highway Program in Godfrey - A program where area group, companies, churches and associates clean up a section of road that the groups has selected. There are 14 groups that clean over 11.1 miles of streets.

Stream Clean up - Clean up by Village's Street Department around Vollmer Lane Culvert. Clean up by other Groups was done around Stone Ledge Drive and Stanka Lane

Construction Projects

Village In-House Work: Storm Sewer Repair - Village's Street Department replace three storm boxes lids, repair or fix two storm drain or box, no feet of storm sewer pipe has been extended and no new storm sewer pipe has been placed.

Village Funded Project – Wenzel Road Culvert Replacement: The project consisted of the removal and disposal of the existing guardrail, demolition, removal, and disposal of the existing concrete box culvert; tree removal, brush clearing, and disposal of said items as necessary for completion of the work; excavation and grading of the creek and creek banks to provide for proper bedding and slope of the CMP; pickup, hauling and installation of CMP with banding; excavation and grading to provide for rip rap at both ends of CMP; placement and compaction of trench backfill to the elevation of the roadway; placement and compaction of any stockpiled and fill material for 2:1 side slopes; grading and shaping the slopes/ditches to allow for proper drainage of the roadway; placing rip rap for slope protection and along all drainage ditches; and seed/straw of any disturbed areas outside of the limits of rip rap and any areas disturbed by construction.

Village Funded Project - 2022 Concrete Pavement Replacement Project - Storeyland Subd. pavement replacement:

The project consisted of the removal and replacement of concrete pavement in selected areas of the Storeyland Subdivision and curb & gutter and driveway replacements at various locations in the Village. Additional work at other locations was added throughout the project working time period.

Village Funded Project – Glazebrook Park Expansion Ph. 1 Project:

The project consists of a lacrosse field, concession/restroom building, pickleball courts, water/sewer/electrical services, sidewalks, parking lots, roads, and all associated grading and seeding. Construction started on October 1, 2021. Issues have come up on some of the ground conditions. Several areas had to be lime stabilization and a ground drain installed. Project was completed November 2022.

Contracted out Engineer Study & Design Storm Sewer Projects

Ridgefield Drainage Improvements Study – Ridgefield Subdivision and surround area:

The Village has been battling constant drainage problems in and around the Ridgefield Subdivision located off of Pierce Lane in the Village of Godfrey beginning shortly after its construction in the early 2000's. Several additional in-house projects have been performed in the area to relieve the situation with minimal results. The Village issued a Request for Qualifications (RFQ) on August 12, 2020, for a highly qualified consulting firm to perform a drainage study, preliminary engineering, land acquisition, and construction engineering services for the Ridgefield Drainage Improvements project. The Village's approved consulting firm agreed to an Engineering Service Agreement for a Drainage Study and Design Proposal that was accepted by the Village on September 16, 2020. The consulting firm submitted a Technical Memorandum dated December 18, 2020 to the Village on the Drainage Study Analysis done for the Ridgefield Subdivision. A second Technical Memorandum dated January 6, 2021 was submitted to the Village on the Drainage Improvements alternative analysis for the Ridgefield Subdivision. The Engineering firm has design a Preliminary Engineering Plan and had hosted a Neighborhood Meeting on December 1, 2021 to display the proposed design for input. Issues with easements. Because of issues with a couple of owners for easements, CDI on February 10, 2023, presented to the Village several different underground storage options at different locations within the subdivision. However all options would present less storage volume than the original proposed above ground storage. Main option is to still try to work with the owners about obtaining easements for above ground storage.

D'Adrian Gardens Drainage Improvements Study – D'Adrian Gardens Subdivision and surround area:

The residents of D'Adrian have been combating drainage problems in and around the D'Adrian Gardens Subdivision bordered by Pierce Lane to the east and West Delmar Avenue (IL-3) to the south in the Village of Godfrey for decades. The Village, when possible, has assisted with addressing some of the issues. The D'Adrian Garden Subdivision consists of 10 different platted subdivisions with the first two being platted in 1957. There were three subdivisions platted in the 1960's, four subdivisions platted in the 1970's and the last one in 1984. The Village approved a consulting firm (CDI) to an Engineering Service Agreement for a Drainage Study and Infrastructure Assessment Proposal at the Village Board meeting on March 2, 2021. CDI prepared a Final Submittal of the "D'Adrian Drainage Improvements – Infrastructure Assessment Report" on August 27, 2021. On November 2, 2021 the Village Board approved two Preliminary Engineering Services area projects by CDI – the Seine Pond Project area and the Glen Vista & Montview Project area. CDI submitted 60% Draft Plans for Seine Pond Project for Village review on July 18, 2022. CDI submitted 60% Draft Plans for the Glen Vista & Montview Project area for Village review on December 16, 2022.

Storm Sewer Projects under the American Rescue Plan Act (ARPA) funds by Madison County

Camelot Subdivision – Between 5715 & 5719 Sir Gawain Dr.: Engineering Service Agreement with Juneau dated November 2, 2022. The project will consist of the replacement of existing storm sewer across Sir Gawain Dr. and outfall roughly at the area behind 5715 Sir Gawain. The Engineering Services will be in 3 Phases. Phase 1 – Survey & required Easement documents. Phase 2 – Design and Phase 3 is Contract Bid and Award.

Summerfield Ph. 2 Subdivision - 5223 Sundrop Ct.: The issue is stormwater erosion problem and bank stabilization improvements. Engineering Service Agreement with CDI dated November 2, 2022, is for a Drainage Study & Alternative Analysis. The agreement proposed scope of work is to evaluate known stormwater erosion problems based on field walks and resident feedback; conduct field investigations for Stormwater assessment; analyze the drainage area of the existing stormwater channels based on preliminary data; prepare drainage Study for the project area; review impact of the researched subsurface soil conditions on potential solutions; recommend stormwater and bank stabilization improvements to alleviate identified issues. CDI at a Video Conference Meeting on February 02, 2023 presented Five Proposal options with cost estimate. The Village has decided to eliminate two of the options and now focus on the three remaining options in the design phase to present to the Village Board at a future meeting.

Piasa Hills Subdivision – 3516 West Delmar Ave.: Engineer Service Agreement with SMS dated November 2, 2022, is to conduct a drainage study, around 3516 West Delmar Ave., to isolate the issues and identify potential solutions which could then be analyzed to determine the most cost-effective solution.

Circle which minimum control measure addressed:

- 1.) Public Education and Outreach
- (2.) Public Participation/Involvement
- 3. Illicit Discharge Detection & Elimination
- 4.) Construction Site Runoff Control
- (5.) Post-Construction Runoff Control
- (6.) Pollution Prevention/Good Housekeeping
- E. Reliance on Government Entities for Permit Obligations

The Village is part of the Madison County Co-Permittee Group.

2022 - Annual Lewis and Clark Water Festival

Water Festival

Each year, NGRREC's Water Festival is flooded with hundreds of fifth grade students and their teachers for a fun-filled day of educational activities and interactive demonstrations. Host with the help of local partner organizations, the annual Water Festival offers over 30 hands-on activity station promoting water resource awareness as well as canoe rides and fishing.

Participating teachers attend a one-day teacher workshop in advance of the festival where they are introduced to concepts of water resources management and big river ecology. Teach also receive free materials and resources to incorporate water conservation education into their classroom sessions to help prepare students for the festival.

In addition to the materials and workshops, participating schools are provided with funding for bus transportation and teacher substitutes.

2022 celebrates the 20-year anniversary of Water Festival. Since 2002, more than 13,000 students and 150 teachers from 42 schools have participated in Water Festival.

Green Schools Program (GSP)

Kicked off the 2022 Green Schools Program

- Enrollment is now open, and open year round, 17 schools enrolled so far
- Grant round for 2023 school grant projects will be open next month- Up to \$2,000 for environmental education projects

Stormwater Education Program (Illicit Drainage Stencil Opportunities)

- Hosted event at Willoughby Farms August 27th in partnership with Heartlands, pictures below
- Event to be hosted again in the future with hopes of participation, possibly work directly with a teacher
- The storm drain labeling supplies can be rented and used
 - o We provide the stencil, paint, rollers and trays, safety vests, trash bags
- We have activity books available focused on storm water education

America Recycles Day Poster Contest coming up

- Theme: When in Doubt, Leave it Out! Focus on recycling contamination
- Deadline October 21st, 2022 @4pm, grades K-12

2022-2023

Madison County Green Schools Program Guide

The Madison County Green Schools Program supports the important work done by teachers and school staff to help students develop the skills to become wise stewards of our land, air, and water. In this guide, you will see that the Green Schools Program offers collection programs, county-wide competitions, professional development opportunities, grant funding, and recognizes individuals for their dedication to their school's goals.

Overview

This program provides support, incentives, and educational resources for new and ongoing resource management practices within private and public Madison County schools. While each school's approach varies based on its needs, all schools share a common set of goals. Our program's values are rooted in the wise use of resources, the creation of healthy outdoor spaces in and around schools, and access to meaningful learning opportunities about Madison County's ecology and natural spaces.

Program Objectives

- Offer a comprehensive education program that promotes student learning about local environmental concepts and processes.
- Provide support for schools working to improve resource and energy management practices and environmental science-based learning experiences.
- Generate community awareness and encourage wise management of land, air, and water while increasing resident engagement with outdoor spaces in Madison County.

Focus areas of the Green Schools Program:

Madison County Ecology

Land, Air, and Water Management

Waste Diversion and Reduction

What does it mean to be a Green School?

When thinking about a schools sustainability, it is important to know that every school has different needs and resources. Our Green Schools Program works with each individual school to develop goals based on what works best for their students and staff. The term 'Green School' refers to a school that enrolls in the Green Schools Program and actively participates in and promotes the countywide collection programs, competitions, and **opportunities.** We understand that some programs that we promote may not work for all schools but we encourage everyone to make an effort in all areas of school sustainability that they feel they can set obtainable goals.

Fifth grade students participating in hands-on activity stations at Water Festival, 2019

In this guide you will see a variety of Collection Programs, Competitions, and Opportunities, including grant funding, professional development for educators and educational resources for the classroom.

<u>Collection Programs</u> in schools involve setting up a collection bin for different types of materials to be recycled that are not accepted in typical single stream recycling. These collections are non-competitive and there is no monetary award for the items listed for collection under this category.

<u>Competitions and Contests</u> mean that there is an award for the winning schools or individuals. Some competitions offer a check to the top three winning schools or a VISA gift card to the winning individuals.

<u>Opportunities</u> are offered to schools enrolled in the Madison County Green Schools Program from sources external to the county such as the EPA and other partnering organizations. Some of these opportunities typically involve registering the school with another organization or website in order to participate.

- **Grant Funding** is available to schools enrolled in the Green Schools Program to assist with projects such as school gardens, water bottle filling stations, and outdoor classrooms.
- <u>Professional Development</u> and networking opportunities for educators.
- <u>Educational Resources</u> and classroom presentations are also available to schools.

Students at East Elementary working in their raised bed gardens.

Are you thinking about your schools resource management practices but not sure where to start? Schedule a time to meet with Bailey, the Green Schools Coordinator!

Bailey Lutz began serving as the Green Schools Coordinator in the Fall of 2019. She currently has her Bachelors degree in Environmental Science and her Masters degree in Youth Development. Bailey has a great interest in environmental education and enjoys encouraging others make

sustainable choices that lessen their impact on our environment and natural resources. Born and raised in Collinsville, IL, Bailey has a strong connection to Madison County Schools and strives to develop connections with educators and schools to help them achieve their goals. If you want to learn more about the Green Schools Program or want to discuss potential projects for your school, reach out to Bailey!

618-296-4606

bnlutz@co.madison.il.us

Make sure to BEE informed!

The Madison County Green Schools Program sends out newsletters via email with updates throughout the year. This newsletter includes upcoming deadlines, shout outs to schools and teachers for their hard work and opportunities within the community. Make sure to stay informed by signing up for the newsletter HERE.

Accomplishments of the Madison County Green Schools Program

Since it began in 1990, the Green Schools Program has become a valued part of local school culture and a vital tool in helping our students become active and informed community stewards. Now in its 30th year, the Green Schools Program is a regional leader dedicated to meeting the needs of the community and supporting a high quality of life for children and students. The numbers below reflect the programs reach and impact on our county:

30: Active years of Green Schools Program

80: Participating Madison County Schools

15: Green Seed Grants available every year

20,000: Students impacted each year

How Does It Work?

The Madison County Green Schools Program exists to promote student learning about local environmental concepts, provide support for schools working to reduce waste and improve resource management efforts, and to increase community participation in the wise management of land, air, and water in Madison County.

STEP ONE: Answer the call!

A dedicated teacher or school staff member chooses to participate in the Madison County Green Schools Program as the coordinator for the school. This might include a team of individuals (such as a principal, teacher, custodians etc.) or just one individual teacher.

STEP TWO: Enroll in the Program

The school coordinator, along with other staff and the schools Green Team if needed, fills out the <u>Goals and Interests Survey</u> to identify the schools sustainability goals. Schools can enroll at any point throughout the school year, but if enrolled by the October deadline, the school qualifies for a \$100 stipend. In this survey, the school coordinator identifies which county sponsored programs and competitions that the school will promote for the school year.

STEP THREE: Take Small Steps (For Big Change)

After enrolling, schools can participate in county sponsored programs and competitions through out the year, teach standard-aligned lessons provided by the Green Schools Program, and implement policies and practices to reduce waste in and around their school. The school coordinator works directly with the Green Schools Program County coordinator who will provide the school with the necessary supplies and resources for

STEP FOUR: Receive Support and Optional Grant Funding

The Green Schools Program provides planning tools, logistical support, materials for classroom use, and if enrolled by the October deadline, a \$100 stipend to be used towards their schools goals. Participating schools are also eligible to receive Green Seed Grant funding for projects such as school gardens, water bottle filling stations, and other efforts related to waste reduction and improving the quality of air, land, and water in and around the school. Other grant funding opportunities provided by the state and other organizations are also promoted to provide schools with financial support for their resource management projects.

STEP FIVE: Report Back and Celebrate!

At the end of the year, school coordinators are required to complete the End-of-Year Survey which provides the county program with an overview of the schools accomplishments, challenges, and general feedback on their participation in the program. Schools are also then eligible for end-of-year celebration kits to be used for recognition with their students and staff. Additionally, Coordinators and Green Teams can apply for End-of-Year county-wide awards which recognize individuals and groups for their hard work and dedication to the program throughout the year.

Stipends for Enrollment

Each year schools are required to enroll in the Madison County Green Schools Program by filling out a Goals and Interests Survey. This survey helps the school to set sustainability goals and identify the programs and competition they plan to promote among their students and staff. Additionally, this survey will help the County Coordinator to provide your school with educational resources, support, and incentives. Upon completing this Goals and Interests Survey, schools that enroll before the deadline in early October will receive a \$100 stipend for their school to use towards their goals. The graphic on the next page offers suggestions on creative ways to spend your stipend.

Please note that schools can enroll in the Green Schools Program at any time throughout the year, but those who enroll before that October deadline are eligible for the enrollment stipend.

Goals and Interests Form—A sample of questions asked for enrollment

- Does your school have a green team of students and/or staff members?
- What competitions do you plan to promote among your students and staff? These can be competitions you participate in as a school or your students can participate in some of the competitions as individuals.
- What sort of recycling programs does your school currently have? (ie. Paper only recycling dumpster, Crayola marker recycling, plastic bag recycling, etc.)
- What would be helpful in advancing your school's resource management practices or environmental education programs?

Benchmarking Survey

In addition to the annual Goals and Interests Enrollment survey, we ask that schools complete a Benchmarking Survey every five years to provide the Green Schools Program with a more detailed description of any major changes to the school. This survey has several questions that relate to your school building's structure, grounds, and maintenance practices. It may be helpful to complete these questions with a custodian or member of your Facilities Maintenance staff.

Ideas on How to Spend Your Enrollment Stipend!

Make or <u>purchase seed bombs</u> for students to take home in the Spring. Seeds packed in

air-dry clay will sprout where you plant them and help support bees and other important pollinators.

Sign up for a Terracycle Zero Waste Box and help your school reduce its waste by recycling unusual items, from action figures to athletic balls.

Use bulletin board materials to create a display in the school lobby to inform parents and visitors of your efforts and gain support.

Install heat-and **UV-blocking** window film in classrooms that get the hottest on warm afternoons.

Purchase the materials to create an indoor worm bin for composting and use it as a learning opportunity to teach the cycle of

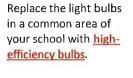

Add feeders for local birds or hummingbirds to your schoolyard. Use opportunities for observation to enrich descriptive writing, graph feeder visitors, or learn about concepts such as migration and physical adaptations.

Adopt a barn owl, red-tailed hawk, or peregrine falcon from World Bird Sanctuary.

Take a hike! Use your stipend towards transportation costs for a field trip to one of Madison County's many outdoor learning destinations, such as the Watershed Nature Center.

Plant a native garden to support pollinators and use it as a "living lab" for topics such as plant life cycles, food webs, and prairie ecosystems.

Invite a guest speaker to your schools assembly to teach on a sustainability topic and use the stipend to cover the speakers fees.

TIMELINE- What to Expect Throughout the Year

August

Review the Green Schools Program Guide and begin thinking about your schools sustainability goals for the year. Feel free to reach out to Bailey to discuss your goals in more detail.

September

Recruit students and staff to help support your schools goals. Begin your <u>Goals and Interests Survey</u> to help set goals and a sustainability plan for the school year. This month can also focus on promoting your collection programs for the school that will be ongoing throughout the year (plastic bag collection, Crayola marker collection, used shoe collection, etc.)

October

Deadline to enroll and qualify for the \$100 stipend is the second Friday in October. Entries for the America Recycles Day Poster Contest are also due on the fourth Friday in October.

November

America Recycles Day is on November 15th, think about how your school can celebrate! This month is also a good opportunity to promote used/broken holiday string light collection. You will also receive your enrollment stipend this month also so you can consider ways to spend it.

December

Work on <u>Green Seed Grant</u> application (if applying for funding). Rain barrel design contest entries due on the second Friday in December.

January

Green Seed Grant Applications due second Friday in January.

February

Promote the Spring competitions and contests at your school (PhotoVoice Contest, Clean Air Bookmark Contest, Mississippi River Plastic Pollution Competition). Schools receiving Green Seed Grants are announced this month!

March

PhotoVoice and Bookmark entries due second Friday in March, EEAI Conference held in early march

April

End of Year Surveys due second Friday in April (important deadline to make sure you get your end of year celebration kit), Data collection for MRPPI due at the end of the month, apply for end of year awards, winners announces for PhotoVoice and Bookmark Competitions.

May

Celebration and Awards! End of Year Celebration kits are distributed out to schools who complete their end of year surveys.

riche tront office of your school and encourage students to collect and recycle these hard-to-recycle items. Once the collection bin is full, or at the end of the year, contact your county coordinator to arrange a pick-up or drop off of the items. Need a collection bin and label for your school? Please let your county coordinator know!

Soda Tabs

Keys

Eyeglasses

Holiday String Lights

Crayola Markers- Program on pause as of August 2022.

GreenMantra will now recycle both pre- and postconsumer plastic markers from across all of North America, expanding its feedstock stream for producing its specialty polymer additives. The company will transform Crayola's discarded plastic markers into high-value polymers that can then be used in the production of industrial products to enhance critical infrastructure applications (things like asphalt roads, roofing products, and plastic drainage pipes), while also enabling increased use of recycled content in those applications.

Plastic Bread Tag Collection

In this school-wide collection program, students and staff will collect plastic bread tags to be recycled by <u>Danielle Cares for Chairs</u>, a non-profit started by a 17 year old in Indiana that collects large amounts of plastic bread tags, recycles them directly through a plastic recycler, and uses the profits to purchase mobility products for individuals.

These #6 plastic bread tags are not recyclable through a regular single stream process because of their small shape and size, but they can be collected and recycled through a special process.

Did you know? There are approximately 1300 bread tags to 1 lb.

These bread tags are made from #6 polystyrene and are melted down and recycled into products such as drinking cups, egg cartons, coffee pods, tape dispensers, and sporks. Collection containers will be provided to school coordinators with promotional materials to distribute throughout the school. By

utilizing this collection program, students have the opportunity to take small steps for big change.

As of June 2021, Danielle Cares for Chairs has collected 4.5 million bread tags and has given away 9 mobility products.

Fantastic Plastic Competition

Between 500 million and 1 trillion plastic bags are made each year! These lightweight plastic bags travel through our waterways where they pollute our ecosystems and harm wildlife.

Through this **competition**, students and staff are encouraged to collect plastic bags and other dry stretchy plastic at their school to then be recycled through a local retailer. Schools will be provided with a collection bin for their school and toolkit with resources to promote the competition with students and staff.

Competition Rules:

- Students and staff will collect plastic bags and stretchy plastics at a designated location in the school (front office, teacher's classroom, cafeteria).
- The school coordinator will weigh the collected bags and report to the Madison County Green Schools coordinator in their end of year survey. The collected bags and plastic can then be taken to a local Dierbergs, Schnucks or other local retailer to be recycled.
- Winning schools will be determined by calculating the lbs. collected divided by the number of students enrolled at the school.

First Place School \$300
Second Place School \$200
Third Place School \$100

Get your free plastic bag collection bin and toolkit today!

TREX Plastic Film Recycling Challenge

In this nation-wide competition hosted by <u>TREX</u>, students and school staff are encouraged to collect and recycle plastic bags and stretchy film.

THE PLASTIC FILM RECYCLING CHALLENGE

Third grade students at Whitehouse School in Reading Township N.J. collected more than 300 lbs. of recycled plastic.

"Trex® was founded on the premise that ingenuity can help extract value from what was once seen as waste. In creating this turnkey program for schools, we provide students with a better understanding and appreciation for the importance of recycling by demonstrating how small, everyday efforts can translate into a tangible product and successful business." -Bryan Fairbanks, President and CEO of Trex.

Schools are encouraged to participate in this nation-wide competition in addition to the county-wide competition, Fantastic Plastic. Registering and reporting for county-wide competition Fantastic Plastic should be done through the county coordinator while the nation-wide competition through TREX should be done through the TREX website.

What Can Be Recycled?

"After more than a decade, the Trex® Plastic Film Recycling Challenge continues to educate and inspire young people by providing a program in which students can play an active role in preserving the environment and making a difference." -Stephanie Hicks, Materials Sourcing Manager for TREX

Mississippi River Plastic Pollution Competition

In this competition schools participate in a <u>citizen science project</u> focused on recording data on litter at different points along the Mississippi River. This competition will require the use of the Marine Debris Tracker app which will allow participants to log the litter they pick up, as well as the use of GPS which tracks the location of the litter.

The problem: It is estimated that 40% of plastic pollution entering the Gulf of Mexico, and then into the ocean, originates from the Mississippi River. This competition targets the problem of plastic pollution in our waterways and helps to track what plastic items are being littered.

We encourage students, their families, and staff to participate in this competition. If you do not have a smart phone or portable electronic device, contact your school coordinator to find out how to record your collection numbers.

HOW SCHOOLS CAN PARTICIPATE:

- Students (or their parents) and school staff must download the Marine
 Debris Tracker app and log in with their school account information.
- Select the list MRCTI (icon at the top of the page).
- Students select an area to clean up litter. This can be in their neighborhood or one of the targeted areas suggested by Madison County.
- Students and staff use the app to collect data and the litter that they clean up.
- School coordinators will then select 'download my data' for the school account and submit to Madison County. The top three schools will receive the prize money to use towards their school's sustainability goals.

Clean up supplies are available on a limited basis to participating schools (i.e.. Trash bags, gloves, safety vests, and litter grabbers). This competition will be held annually through the entire month of April. For complete competition rules, please contact the County Coordinator for more information.

In 2020, the following schools won the top three prizes 1st Place (\$500) Hamel Elementary School 2nd Place (\$400)- Highland High School 3rd Place (\$300)- Woodland Elementary School Bonus Prize (\$200) Hamel Elementary School

To view a video tutorial on using the app and to find out more about the Marine Debris Tracker App, please scan the QR Code or visit debristracker.org

iCompost Contest

Composting is the natural process of recycling organic matter such as leaves and food scraps, into valuable fertilizer that can enrich soil and plants.

Composting helps to save landfill space and lower your carbon footprint.

International Composting Awareness Week is May 1st-7th this year and we are celebrating with this annual contest open to all Madison County students in grades K-12th. Participating students must be enrolled at a 2022-2023 Madison County Green School. Students should design a poster or video

(based on their grade level outlined on the contest form) that showcases the benefits of composting. Winning students will receive a Dual Chamber Composting Tumbler.

Please view the <u>Composting 101</u> flyer for tips and tricks on how to create and maintain a compost pile. You can also visit www.epa.gov/recycle/composting-home for more composting information.

View the full contest rules and entry form **HERE**.

Upcycling Innovation Challenge

The Madison County Green Schools Program invites students in grades K-12 within Madison County schools to participate in the NEW Upcycling Innovation Challenge. Upcycling is the act of creating a product from waste or unwanted items or adapting an existing product in a creative way to add value. When items are upcycled, they reduce waste from going to the landfill and improve the efficiency of our resources.

All entries and entry forms must be received no later than 4:00 pm,
April 14th, 2023. Entry forms can be mailed, dropped off in person, or
submitted online via the link on the entry page. Winners will be recognized on our Madison County Resource Management Facebook page, Instagram, and website.

Winning entries will also be displayed in-person at the County Administration Building.

Please see the Contest Rules and Entry Form for full details.

PhotoVoice Contest

This <u>contest</u> allows 6th-12th grade students the opportunity for their voice to be heard through photography by documenting their community's needs and resources. Students should photograph a scene that represents their community or expresses their point of view as it relates to sustainability and the wise use of our land, air, or water in addition to a 4-5 sentence description of their photograph.

Photographs might include subjects such as:

- Human activities and habits that support or are possible because of healthy land, air, and water.
- Agricultural practices that support a healthy and thriving Madison County.
- Favorite places to explore outdoor Madison County, particularly those that might represent local plants, animals, or habitats that are carefully managed or conserved.

2021 first place winner, Collinsville High School Student- Corey Patton

This competition is typically promoted in February and submissions are due the last Friday in March. First place winners receive a \$100 VISA gift card, second place receives a \$75 VISA gift card, and third place receives a \$50 VISA gift card.

Clean Air Bookmark Contest

This contest allows students (grades K-12) to design a bookmark showing the various ways to improve air quality in the Metro East region such as carpooling, walking, bicycling, riding transit, using solar and wind energy, etc. Each year students have a theme for their grade level to focus on; 'We Deserve Clean Air', 'Planes, Trains, and Cars!', 'Clean Air is Our Future'. First place winners in each of the four grade level categories win a new Kindle in addition to the top three winners in each category who win a \$50 VISA gift card. See the competition rules for more details. Deadline for entries is the last Friday in March.

Winning students at Highland Primary— (L-R) Logan Garson, Madeleine Gourley, Taylor Logsdon

First place bookmarks from 2021 pictured left to right (K-2) Logan Garson, (3-5) Lillian Bell, (6-8) Savannah Kujawa, (9-12) Hannah Heidrich

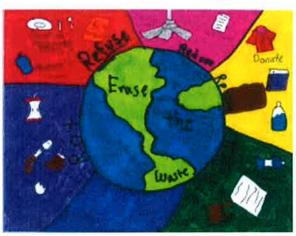

America Recycles Day Poster Contest

This contest encourages students in grades K-12 to illustrate their artistic talent and "think outside of the recycling bin". Students must design a poster illustrating the theme of the contest focused on recycling. The entry form for 2021 can be found <a href="https://example.com/here/beta-figures-the-recycling-the-recycl

Theme in 2020: The five R's: Refuse, Reduce, Reuse, Recycle, and Rot (Compost). Whether they're learning from home or in the classroom, this poster contests allows students to demonstrate the importance of our actions and how they impact the environment. This contest is typically promoted throughout the month of October and due in early November. Winners are announced before America Recycles Day, November 15th.

Alissa Korsmeyer 6-8th First Place Winner 2020

Suzy Smith 3-5th Grade First Place Winner 2020

Theme in 2021: Stick with the Six! Students should illustrate the importance of recycling responsibly and only placing items in the recycling that belong in the bin! Although some schools have paper only recycling, single stream recycling is available in most homes and public areas within Madison County. This type of recycling involves only recycling the items illustrated below. If it's not on the list, it doesn't go in the bin. Students should design a poster encouraging Madison County residents to stick with the six when recycling items in a single-stream recycling bin.

Rain Barrel Design Contest

Rain barrels are a great way to conserve water and are completely free to use in your landscape. In this contest, students are challenged to create their own design for a rain barrel.

All design submissions are expected to illustrate the benefits of capturing and/or reusing rainwater (rainscaping or rain water harvesting), such as erosion control, improved water quality, reduced flooding etc.

Contest entry forms will be due the second Friday in December, winners will be announced in January, and rain barrels delivered to schools in the early Spring.

There are four grade level categories for students: K-2nd, 3rd-5th, 6th-8th, 9th-12th. The first place design from each category will receive a sign and rain barrel for their school, delivered in the Spring.

Kate Becker 3rd-5th grade winner in 2015 with coordinator Susie Brauns, Highland Elementary

Project Learning Tree

Project Learning Tree® (PLT) is a collection of award winning, multi-disciplinary environmental education activity guides for educators and students in Pre K-grade 12. It is a program of the Sustainable Forest Initiative.

UsagainUse it and

USAgain has been providing people across the country an eco-friendly solution for ridding themselves of unwanted clothes and shoes., effectively diverting millions of pounds of textiles from landfills each year.

A bin is place in an unused area of the parking lot where community members can drop off their unwanted clothes and shoes. At least once per week, we collect the items and bring them to our area warehouse. USAgain redistributes the discarded gently-used clothes to places with great demand, supporting the local and global economy. Non-reusable clothes are recycled into insulation, rags, or are broken down to reclaimed fiber. USAgain collection bins generate revenue for your school as part of a nation-wide contest.

In 2020 as part of an America Recycles Day Challenge, the students and staff at Dorris Intermediate in Collinsville IL promoted this collection with their community and was awarded the first place prize of \$2,500 in the nation-wide competition.

Pictured to the right is Clay Smith, CHS Athletic Director, with two DIS students.

Accepted Items

Everyone is affected when the air quality is unhealthyespecially older adults, children and teens, people with asthma or heart conditions, and those who work or exercise outdoors. The <u>Air Quality Flag Program</u> uses brightly colored flags to inform students and staff on the quality of air and when to do less intense activities outside, to take more breaks or move activities indoors. By typing in your zip code at

<u>www.airnow.gov/flag/whichflag</u> you can view the air quality for the day and determine which color flag to fly at your school.

How to participate-

1. Get your flags

Notify your county coordinator that you are interested in participating in this program for the year to get your set of flags ordered (supplies from the county are limited each year). Schools will be required to complete an online registration form through the airnow.gov website.

2. Educate your students and staff on the program

You can access the Coordinator Handbook and Fact Sheet on the airnow.gov website in addition to sample parent letters and emails that can be sent to school staff to tell others about the program. Air Quality Flag posters are also available to hang up in the school hallways to remind everyone what the colors mean.

3. Fly the day's flag

You can sign up for a daily email about the air quality forecast or you can download the Flag Program widget to your homepage.

4. Take actions when the air quality is unhealthy!

The <u>Airnow.gov</u> website includes activity guides on actions to take for each color.

Tree-Plenish

From notes to homework to worksheets, schools consume a lot of paper.

Tree-Plenish's mission is to create more sustainable schools by replenishing the environment with these lost resources. Through student-led events, Tree-Plenish is able to plant trees in the community based on approximations of school

NEW IN 2021

paper usage.

Tree-Plenish also believes there is power in community. Their platform gives student leaders the opportunity to harness this power and enact meaningful environmental change.

Trees play a vital role in our lives by providing us with air, filtering greenhouse gases from the atmosphere, and providing monetary

value through increased property value and reduced energy usage. Through hosting tree-planting events, the goal is to raise awareness about the value of trees and contribute to maintaining a healthier environment.

Become a Storm Smart School

Stormwater management is essential for healthy communities. Without it, pollution enters local water bodies and the risk of flooding increases. Stormwater runoff is a leading cause of water pollution in urban and suburban areas and it presents many environmental, social, and economic challenges.

Schools play an essential role in public education, involvement, and outreach efforts in the community. Additionally, they provide the ability to combine environmental education with service-learning opportunities. Green Infrastructure provides many community benefits in addition

to providing cost-effective and resilient approach to managing wet weather impacts.

Regulatory Compliance and Promote
Environmental Literacy.

Rain Gauge Program

Become a CoCoRaHS Observer at School! The <u>Community Collaborative</u>

<u>Rain, Hail, and Snow</u> (CoCoRaHS) is a unique, non-profit, community-based network of volunteers of all ages and backgrounds working together to measure and map precipitation (rain, hail and snow). Developed in 1998 by the then Colorado State Climatologist Nolan Doesken and the Colorado Climate Center at Colorado State University, the network now includes

20,000 active volunteers in all 50 states, Canada, Puerto Rico, the U.S. Virgin Islands and the Bahamas. Collectively, these volunteers log around 12,000 reports every day, using a simple manual rain gauge to capture the precipitation for each 24-hour period. The resultant data is made public immediately and is used by a wide range of people, including weather forecasters, hydrologists, water managers, researchers, farmers, and ranchers.

To participate in this program, school coordinators should notify the county coordinator to obtain a high capacity 4" rain gauge from CoCoRaHS. Schools are not expected to report everyday, but are encouraged to participate as much as they can.

Lesson plans built on citizen science are available for educators and parents through the CoCoRaHS website. These scientific activities for the classroom and at home are to be

used while collecting precipitation data for the CoCoRaHS network. Developed for a variety of grade levels, these lesson plans are built around CoCoRaHS's emphasis on measuring precipitation.

Educational Resources for the Classroom

Listed below are FREE educational resources available to Madison county Green Schools. If you need resources specific to a topic not listed below, please contact your county coordinator.

The Recycling Simplified Education Program from Republic Services contains everything you need to teach your students about recycling. You'll find step-by-step lesson plans and supporting materials including activities, videos, student certificates, and handouts for students to bring home.

Lessons within each grade range build upon students' understanding and help them gain greater awareness of the broader environmental,

sustainability, and societal issues related to recycling and its role in conserving natural resources. The lessons can be taught as a unit or individually – whatever fits best for your students and your curriculum. Download the full curriculum at recyclingsimplified.com/for.educators

In these <u>downloadable books</u>, educators can engage students with learning activities aligned with Next Generation Science standards.

- Meet the Monarchs (grades 2-4) this activity explores basic features and behavior of the Illinois state insect. This book includes a glossary, full-color photographs, engaging illustrations, as well as steps children can take to protect monarchs.
- Meet the Monarchs (grades 5+) this activity provides an in-depth look at the monarch butterfly and examines concepts such as structure and function, migration, and human-environment interactions. This activity also includes a short answer comprehension quiz and answer key.
- Buzzing About Pollinators (grades 2-3) this activity provides a complete look at the process of pollination-how it happens, why it's important, and who does it. This extensive book includes a glossary, thirteen incredible images, a list of popular bee-pollinated foods, and links to online resources.

Class Your Trash Activity

In this interactive activity, students will increase their awareness and understanding of waste reduction while interacting with one another to learn sorting techniques of every day items that they use. Contact your County Coordinator to get own activity today!

Resources from NAAEE

The North American Association for Environmental Education is committed to using the power of education to advance environmental literacy and civic engagement to create a more equitable and sustainable future. Through signature programs, advocacy, conferences, and other activities, NAAEE works with partners, educators, and policymakers across North America and beyond to advance their mission. Sustainability Training for Teachers hosted by Madison County

In this training for teachers (adapted to a virtual format in 2020), participants watched a series of pre-recorded videos presented by experts in their field who covered a range of topics related to school sustainability. Speakers in this training included:

Bailey Lutz, Madison County Green Schools Coordinator, discussed the Green Schools Program and funding opportunities with the Madison County Green Seed Grants. **Lindsay Serrano**, Farm to School Coordinator with the Goshen Market, focused on school gardens.

Chris Hartley, Science Education Coordinator with the Butterfly House, discussed the diversity of native insect pollinators showing specimen's for illustrations, and demonstrated how to build a bee house.

Jake Williams, Associate Professor with SIUE's Department of Biological Sciences and member of SIUE's Beekeeping Association, covered pollinators and classroom activities.

Crystal Stevens, a local educator, herbalist, author, gardener and composting expert who focused on composting in the classroom and at home.

The goal of this training was to provide teachers with resources and ideas to help schools, students, and staff make sustainable choices. Teachers were also provided with a tool kit that included a variety of sustainable items to be used in the classroom as well as materials and books to support each of the speakers' presentations.

The Sustainability Institute for Educators

This is a three day professional development opportunity for educators focused on the connection between sustainability issues and education.

The 2021 Institute focus: The Interconnectedness of People, Animals, Plants in our Shared Environment

Recent events have illuminated the need to find solutions to the public health, environmental, and conservation challenges of the 21st century. The One Health Framework takes a collaborative and interdisciplinary approach to finding these solutions. One Health is not new, but it has

become more important in recent years. This is because many factors have changed interactions between people, animals, plants, and our environment. Sessions will facilitate ways to incorporate this awareness in all levels of education and instruction.

The Sustainability Institute for Educators challenges participants to help learners build awareness, recognize responsibility, and take action as global citizens working to build a sustainable world. Held annually in June, the institute is designed for K-12 and informal educators from all roles and environments.

Annual scholarships are available to Madison County educators! Interested in learning more? <u>Webster.edu/education/sustainability-inst-educators.php</u>

The Environmental Education Association of Illinois Annual Conference

In 1972 a group of committed and concerned citizens -- both conservationists and teachers -- founded the Environmental Education Association of Illinois. Since that time, members of EEAI have provided

leadership on this front at the national, state and community levels. The strength of EEAI comes from the involvement of its members. Their participation in state and

regional events raises the profile of environmental education and challenges decision-makers to give environmental literacy higher priority. EEAI provides educators with many professional development opportunities throughout the year as well as networking events to connect with others around the state.

Conduct a Student Food Waste Audit at your School!

On September 16, 2015, the U.S. Department of Agriculture (USDA) and U.S. Environmental Protection Agency (EPA) announced the United States' first-ever national food waste reduction goal, calling for a 50-percent reduction by 2030. In our food system, there are many points at which food loss and waste are generated, including in schools and households.

The EPAs <u>Guide to Conducting Student Food Waste Audits</u> is intended to help educate students about the amount of food they waste in their school cafeterias and to encourage them to reduce waste and eat more of the nutritious foods provided through USDA's school meals programs or brought from home.

To begin focusing on food waste in your school, students must first understand the scope of the problem.

How much food or beverage items do they waste? Which types of foods are being wasted most? Why are students not eating particular food items?

Doing a student food waste audit in your school cafeteria will help answer all of those questions. After studying the audit data, students and schools can develop and implement food-waste reduction strategies that make the most sense for their particular situation. A follow-up food waste audit after the strategy has been fully implemented can reveal how successful a particular strategy or strategies were in reducing food waste. We encourage students to organize multiple food waste audits in a school year to engage each other in finding creative ways to make sure nutritious food ends up in hungry bellies and not into the trash can. The end of the guide provides a list of food-waste reduction strategies. Preventing food waste is not only the best way to make sure children eat healthy meals, but it is also the best way to reduce the damaging environmental impacts food waste has on our world.

31% of food at the consumer & retail level goes uneaten (Buzby et al.)

Only 24% of people say they are very knowledgeable about reducing food waste (John Hopkins Bloomberg School of Public Health)

Food Recovery Hierarchy

Source Reduction & Reuse

Feed Hungry People

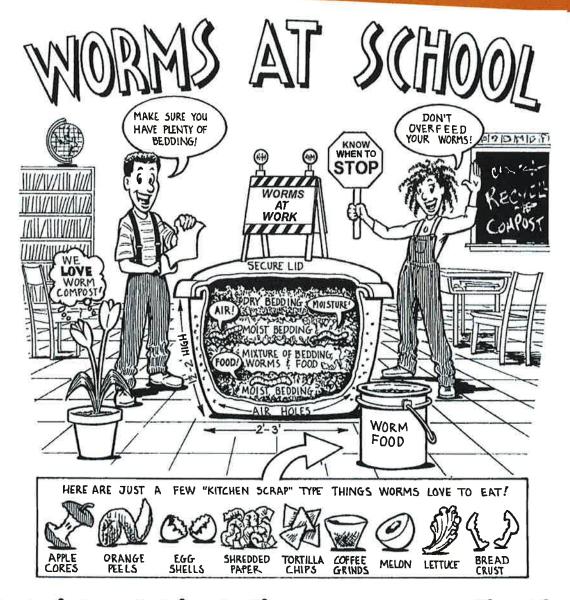

Feed Animals

Industrial uses

Landfill/

Food waste is the single largest component of waste sent for disposal, much of which ends up in landfills, where it generates methane, a powerful greenhouse gas

(U.S. Environmental Protection Agency)

Are you interested in starting a worm composting bin at your school?

Contact your county coordinator to inquire about getting supplies for your classroom to start a vermi-composting bin. This is a new initiative in 2021-2022 and will be an effort to reduce food waste entering the landfill. It is recommended that schools start off with small scale composting in individual classrooms before implementing a larger scale cafeteria composting program. Supporting educational materials can be provided upon request in addition to classroom presentations by the Green Schools Coordinator.

For more information, visit the EPA's website,

How to Create and Maintain an Indoor Worm Composting Bin.

Green Seed Grants

The Madison County Green Seed Grant Program is designed to help private, public, and parochial schools meet objectives related to waste reduction and diversion, wise management of air, land, and water, and support of Madison County ecology.

Grant funds are awarded on a reimbursement basis and are not to exceed \$2,000. <u>Applications are due the second Friday in January</u> and grant funds must be spent with reimbursements requests be submitted by the first Friday in October that same year. The application can be found <u>HERE</u>.

Grant proposals must include the following items: Completed application, background on proposed grant project, signed grant agreement, and supporting attachments.

Eligible projects are those that seek to:

- 1. Reduce overall school waste.
- 2. Improve energy efficiency.
- 3. Enhance, improve, or preserve the quality of air, land, or water in and around school grounds.
- 4. Improve management of natural resources through stormwater management.
- 5. Support the health of Madison County ecology, natural spaces, and local flora and fauna.
- 6. Provide or enrich learning experiences for students as they relate to waste reduction, energy efficiency, natural resource management, as well as local ecology and nature.

Eligible expenditures include those for supplies and services such as recycling bins, tools, native plants, energy auditing equipment, speaker stipends, etc. Expenditures are not limited to the above list. Other projects not listed in the above categories will be reviewed on a case-by-case basis.

Alton Middle School, 2020 Water Bottle Filling Station

Green Seed Grants Awarded in 2022

St. Ambrose School- Outdoor Classroom

South Primary School- Plastic Waste Reduction
Lincoln Middle School- School Garden Expansion

Evangelical School- Monarch Habitat

Roxana High School- Environmental Improvement Project
East Alton Wood River High School- Outdoor Classroom

Highland High School- Electronics Recycling Drive

Highland Middle- Outdoor Classroom and Native Planting
Leclaire Elementary- School Garden Expansion

Alhambra Primary, 2020 Tree Planting

End of Year Awards- Green Team of the Year

This award recognizes a school's Green Team who has demonstrated a commitment to organizing, managing, and/or leading sustainable activities for their school as part of the Madison County Green Schools Program. The team can be any combination of a principal, teacher(s), custodian(s), aide(s), student(s) or parent(s) who have the responsibility of carrying out the actual greening activities at any public, private or parochial school in Madison County. Please see the <u>award nomination form</u> for the full details and criteria. Nominations are due the <u>fourth Friday in April</u>.

The award consists of a \$500 stipend for the Green Teams School to spend on environmental-related programs.

Finalists are selected using the following criteria:

- Proven accomplishments and commitment to the Madison County Green Schools program.
- Working to create an overall sustainable environment within the school including, but not limited to good or innovative environmental, resource conservations, and sustainability practices. Common practices include improving energy efficiency, reducing waste, reducing water use, conserving habitat, responsible resource management, providing access to local food, reducing storm water runoff, improving water or air quality, incorporating sustainability practices and lessons within the classroom(s), or improving school/community/regional heath or well-being.

2022 Green Team of the Year- East Elementary, Alton IL.

Nominated by Jen Herring who serves as the East Elementary coordinator for the Madison County Green Schools Program, the East Elementary Green Team works to encourage sustainable practices among the students and staff. The 2022 Green Team consists of Jen Herring, Sarah Jones, Lisa Embrey, and Monica O'brien. Together, this Green Team works to provide opportunities to students and staff at the school centered on recycling, gardening, and the new outdoor classroom. As participants of the Green Schools Program for the last 10 years, East Elementary implements many different types of recycling and environmental programs throughout the school.

The biggest achievement for East Elementary this year was the opening of their outdoor classroom which will be used for more sustainability and science education with student's right outside next to the gardens. This has been a 7 year project and they were finally able to cut the ribbon this year and it is ready for use!

Jen Herring explains "All of our sustainability-related activities not only benefit our environment, they also provide educational opportunities to all of our students and community members. My dream for the sustainability efforts at the school would not be possible without the hard work and dedication of the Green Team members."

End of Year Awards- Coordinator of the Year

This award recognizes a school's coordinator for the Green Schools Program who has demonstrated a commitment to organizing, managing, and leading environmental education-related activities as part of the Madison County Green Schools Program. Please see the nomination form for the full details and criteria. Nominations are due the fourth Friday in April.

The award consists of a \$500 stipend to the winning teacher in addition to a \$500 stipend to their school to be

used on environmental-related programs. Applications will be reviewed by the Madison County Green Schools Coordinator and eligible applications will be judged by professionals in sustainability, education, and/or resource conservation fields.

Finalists are selected using the following criteria:

- Proven accomplishments and commitment to the Madison County Green Schools Program.
- Development of a school culture that promotes (but is not limited to) environmental education, conservation of resources and habitat, reduced energy expenditures, student experiences with and knowledge of the natural world, and general incorporation of sustainability-related practices into school routines and procedures.
- Demonstrates exceptional leadership qualities and provides positive examples for colleagues, staff, and students.

2021 Coordinator of the Year- Kim Antonovich-Merz, Mitchell Elementary, Granite City IL

Currently serving as the Green School coordinator at Mitchell Elementary School in Granite City, Kim Antonovich-Merz shows her passion for environmental education and her dedication to the efforts of the Green Schools Program. Since starting in the role as Green School Coordinator in 2004, Kim has worked effortlessly to start a sustainable recycling program. Kim works to hold public recycling days for electronics, shoes, tabs, you name it! If there is something that needs recycled, Kim will find a way to make it happen.

In the 2021-2022 school year, Kim promoted many of the Madison County competitions and collection programs. This included recycling over 140 lbs. of plastic bags, 393 lbs. of soda can tabs, 17 pairs of eyeglasses, and 59 pairs of shoes, just to name a few. Kim also continues to promote

the paper recycling at the school which she helped get started in 2004. She explains, "I feel that the recycling program at Mitchell has had a great impact on students learning to protect our Earth by recycling items instead of sending them to the landfill."

Kari Dioneda, a fellow staff member at Mitchell Elementary School explains, "Kim is the originator of our recycling program and has performed this task as Green School Coordinator honorably for eighteen years. Her long list of achievements overseeing the recycling program and dedication to our planet should not go unrecognized".

End of Year Survey and Celebration Kits

At the end of the school year, school coordinators are asked to report back in a survey their progress, accomplishments, challenges, and totals for collection programs based on their participation in the Green Schools Program. After completing the end of year survey, coordinators and schools are eligible for the competitions they chose to participate in as well as the end of year awards.

Sample questions in the end of year survey include:

- Please provide a brief narrative of how you promoted the Green Schools Program at your school and how you worked towards your sustainable goals.
- Please list any sustainability accomplishments.
- If you were awarded Green Seed Grant Funding in February, please provide a status update on your schools project.
- Were there any significant challenges your school faced with the program this year?
- Is there any way that the Green Schools Program could better support your efforts in the next year?

The End of Year Celebration Kits are offered to schools who enroll in the Green Schools Program and who fill out the end of year survey summarizing their accomplishments and results for the year. The 2020-2021 end of year celebration kit included:

- Tote bag made of recycled plastic bottles
- Solar Rover Kit
- Windmill Green Science Kit
- Trash bags and litter grabbers for a clean up
- Green Schools Program t-shirt, "Keep it Clean, Think Green"
- Reusable water bottle with Green Schools logo
- Dominos pizza gift card to celebrate with your green team
- Grade level appropriate book for your school
- Handouts and flyers including upcoming programs and opportunities
- Annual streamer showing the year that your school participated

The items in the End of Year Celebration Kits change from year to year but always include materials to support your schools sustainability efforts and help recognize the students and staff involved with your schools Green Team. Kits are typically available in April to either be picked up or dropped off after schools fill out their end of year survey.

County-Wide Resource Management Efforts

The Recycling and Resource Management Program works to improve the quality of life for Madison County residents, businesses, schools, and local governments through programs that foster healthy, resilient, connected communities. Madison County is a regional leader in recycling and resource management initiatives. Our innovative programs have received great success in recent years and we continue to build on them.

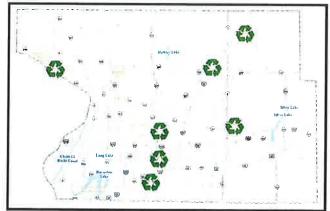

The program serves Madison County communities through a wide range of strategies that promote wise use of resources and awareness of solid waste-related issues and options. These practices result in healthier communities, reduced waste, and cost savings for all members of the county and metro-east region. This approach helps residents make informed choices that contribute to a greater quality of life for those who live and work in Madison County and serve to attract an increased number of potential new residents and businesses.

Single Stream <u>Recycling Stations</u> can be found in the following locations:

- 1. **Edwardsville**: 2500 Troy Road, Home Depot parking lot, serviced Monday through Friday. NOTE: This container is not available on weekends and is removed from the location at 10 a.m. on Fridays.
- 2. **Alton:** 400 Piasa St., downtown Alton across from federal building, serviced Monday, Wednesday, and Friday.
- 3. **Collinsville:** 1600 Olive St, at Fletcher Field Parking Lot, serviced Monday, Wednesday, and Friday.
- 4. **Hamel:** 403 Old US Route 66, Located at the Township maintenance shed and Hamel Community Fire Protection District Office, serviced Mondays and Fridays.
- 5. Marine: 630 W Leopold St., Off Leopold, behind Marine Township Highway Garage, just past

Vernon, serviced Mondays and Fridays.

- Maryville: 8 Schiber Court, Off
 Vadalabene, by Drost Park, Public
 Works Department and Community
 Library, serviced Mondays and
 Thursdays.
- 7. **New Douglas:** 8363 East Frontage Road, Across I-55 from the Pink Elephant Antique Mall, off Alhambra Road, serviced Tuesdays.

Madison County Clean Communities Initiative

As part of Madison County's <u>Building & Zoning Department</u>, the Resource Management Program has designed new opportunities for Madison County citizens to help clean up their streets and neighborhoods. The <u>Clean Communities program</u> will now offer litter cleanup Tool Kits for free to any resident wanting to help keep Madison County beautiful.

Each kit will include:

- Litter Grabber
- Reflective Safety Vest
- Pair of Gloves
- 33 Gallon Trash Bags

Up to six (6) Tool Kits will be available for individual households and small groups.

Up to twenty-four (24) kits will be available for larger scheduled clean-ups and organizations. Requests for larger Tool Kits will require either:

Specific Clean-Up Dates or Location

A group/organization with plans for on-going community clean-ups.

Join our Facebook page <u>Madison County Clean Communities</u> to find clean up events going on in your area! In this group you can post pictures, testimonials, and encourage other volunteers to help our in the community.

A Final Note From the Coordinator

Whether you are new to the Green Schools Program or you have participated every year since it began in 1990, it is my hope that this Program Guide outlined the many opportunities available to Madison County schools and displayed the accomplishments of students and teachers in previous years. I plan to continue the work of my predecessors in addition to expanding the program to best fit the needs of teachers, students, and staff in Madison County schools.

In my role as the Green Schools Coordinator, I continuously encourage Madison County residents and schools find a balance between equity, the economy, and the environment. In doing this, we at Madison County are working to meet the needs of the present without compromising the ability of future generations to meet their own needs. Through the Green Schools Program specifically, and working

directly with nearly 50 schools and teachers every year, I plan to increase the impact of this program by recruiting new schools to join the program in addition to introducing new programs every year. This school year I am really excited about the new competitions and collection programs we are introducing, such as the bread tag collection and the used shoe collection, to spark interest among the schools and teachers who have dedicated many years to participating in the program.

As always, I encourage you to <u>reach out to me</u> with any questions or concerns about the Green Schools Program.

All the best,

Bailey

Tammy Mezo

MS4 notes

[External Email - Please confirm before you open any links or attachments!]

Hi Tammy, here is an outline of my update from the MS4 meeting today.

Green Schools Program Update

We closed out the year with 38 schools participating during the 2021-2022 school year, impacting nearly 18,000 students. We worked directly with teachers to promote recycling opportunities and competitions for schools and students.

End of Year Awards

- The Madison County Green Schools Program 'Coordinator of the Year' award recognizes an individual that shows leadership and creativity in organizing and managing the Green Schools Program for their school.
 - o Kim Merz of Mitchell Elementary, \$500 to the coordinator and \$500 to the school.
- The Madison County Green Schools Program 'Green Team of the Year' award recognizes students and/or staff
 that demonstrate a commitment to organizing, managing, and leading conservation-related activities as part of
 the Madison County Green Schools Program.
 - o East Elementary, \$500 to the school.

Fantastic Plastic Competition- Through this competition, students and staff are encouraged to collect plastic bags and other dry stretchy plastic at their school to then be recycled through a local retailer. During the 2021-2022 school year students and staff collected near 2,500 lbs. of plastic bags and stretchy plastic.

- First Place- Central Intermediate
- Second Place- East Elementary
- Third Place- Trinity Lutheran
- Fourth Place- Leclaire Elementary
- Fifth Place- Mitchell Elementary

Green Seed Grants- we awarded funds to 12 schools in February who applied for projects for the 2021-2022 fiscal year. These projects included school gardens, water bottle filling stations, and outdoor classrooms. So far, half of the schools completed their projects already in the spring and the other half are to be completed in the fall. We will open the 2022-2023 grant round and start accepting application in January.

Thanks!

Bailey Lutz

ONLY RAIN DOWN THE DRAIN

August 27th, 2022

Willoughby Farms, Collinsville IL

9:30-11AM

The water that flows into the stormdrains is not treated or filtered for pollutants. Instead, the water eventually flows into our lakes, rivers and oceans. In this educational activity, participants will interact with an Enviroscape Model to learn about how water travels through our environment and gain a better understanding of how to prevent water pollution.

Participants will then split into groups and label the nearby by storm drains with paint and the stencil "ONLY RAIN DOWN THE DRAIN" shown to the left. Educational materials and handouts will be available to take home.

WHAT YOU CAN DO!

- Make sure small pieces of trash that fit down the sewer drain (straws, wrappers, bottle caps etc.) always make it into a trash can.
- Recycle oil based paint and used car oil at a local hazardous waste site. NEVER dump it down a drain.
- Volunteer in your community to help educate others on the importance of clean stormwater and the safe disposal of chemicals.

Please reserve your spot by emailing or calling John O'Donnell, 618-566-4451 ext. 14 or john.odonnell@heartlandsconservancy.org

Children and adults of all ages are welcome. Anyone under the age of 18 must have parental supervision during the activity. Participants will be asked to sign a waiver at the beginning of the activity.

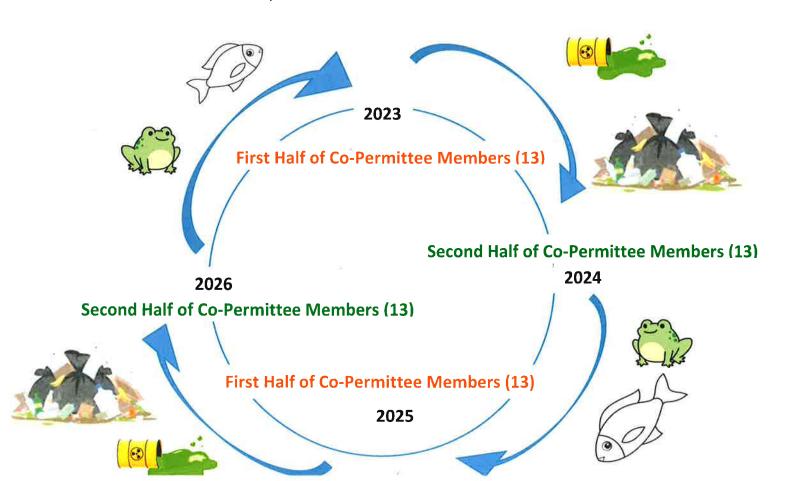

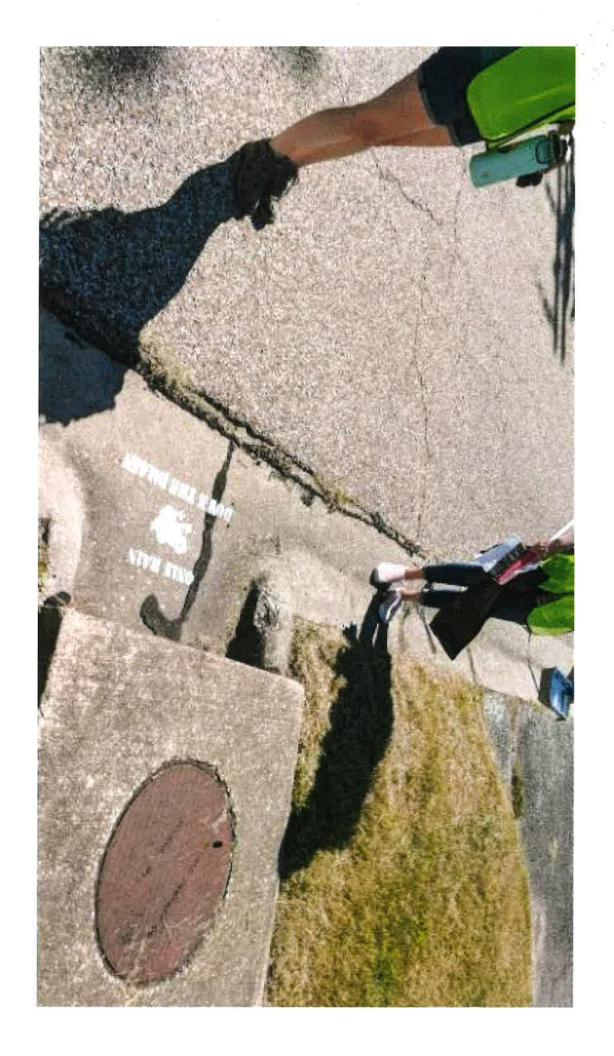

Illicit Drainage Labeling

Storm drain clean-up and illicit drainage labeling. > Only Rain Down The Drain

- 1x a year with ½ of the co-permittee group; other half will participate in alternating years.
- This meets the public outreach and education portion of the NOI and the illicit drain labeling portion of the NOI
- Co-permittee members who are interested can sign up at meetings or through email.
- County will talk with individual members to choose a date and time for their event.
 - Green Schools Coordinator may help out with the grade schools.
 - County can help out to get public involvement. (Flyers, newspaper, online)
 - County will bring materials. (stencils, brushes, paint, paint trays, trash bags for litter clean up)
- County will map out target areas for the Co-Permittee member for when we go out for this event.
- Each member of the co-permittee group will receive emails regarding the details of the opportunity.
- Ideal timeline would be May-October. One month before school is out, and three months after it has started for those interested in getting grade schools involved.
- This event will happen every other year for Co-permittee member and the groups will be determined by participants. Whoever decides earliest they would like to utilize this service from the county.

MADISON COUNTY GREEN SCHOOLS PROGRAM 2022 Clean Air Bookmark Competition

This yearly contest is open to all Madison County students in kindergarten through grade 12. Students are invited to design a bookmark that demonstrates the importance of clean air and its impact on living things—people, plants, or animals—in Madison County. A panel of judges will select first place designs from each grade–level category. Winners receive a certificate, Kindle Paperwhite, and gift card. Winning bookmarks are printed with the winner's name, school, and design for distribution in each winner's school! The contest is divided into four categories, each with its own theme:

- Grades K-2: Keep our Air Clean!
 - With words and/or images, students should think about how they help keep our air clean! They can use people, plants, bicycles, or animals as inspiration for their bookmark design.
- Grades 3-5: Air, Air, Everywhere!
 - Students should think about where they spend a lot of their time and the importance of having clean air in that space, i.e. park, classroom, school, etc.
- · Grades 6-8: Solution to Air Pollution!
 - With words and images, students should focus on what they do as individuals to help keep our air clean. Create a message on your bookmark that encourages other to do the same!
- Grades 9-12: Transportation and Air Pollution!
 - As a high school student, think about how you get from place to place. This category should focus transportation, i.e. biking, riding the bus, driving a car, walking, etc.

Competition Rules:

- 1. The form included on the back of this page must be used for all entries. The form may be copied onto white paper.
- 2. Entries must be created in the form provided. You are encouraged to use the practice box to create a draft of your design.
- 3. Bookmarks should use a combination of words and/or short phrases and illustrations. All work must be original and no copyrighted images may be used.
- 4. Entrants must attend a Madison County school that is currently enrolled in the Madison County Green Schools Program. If your school is not currently enrolled, contact Coordinator Bailey at bnlutz@co.madison.il.us for assistance with simple enrollment steps.
- 5. Participation indicates the entrant grants permission to Madison County to reproduce and publish artwork.
- 6. Selection of winners is at the sole discretion of the Madison County Green Schools Program.
- 7. Incomplete or illegible work will be disqualified.
- 8. Bookmarks may be oriented horizontally or vertically.

NEW 2022 Upcycling Innovation Challenge

The Madison County Green Schools Program invites students in grades K-12 within Madison County schools to participate in the NEW Upcycling Innovation Challenge.

Upcycling is the act of creating a product from waste or unwanted items or adapting an existing product in a creative way to add value. When items are upcycled, they reduce waste from going to the landfill and improve the efficiency of our resources.

All entries and entry forms must be received no later than **4:00 pm, April 15th, 2022**. Entry forms can be mailed, dropped off in person, or submitted online via the link on the entry page. Winners will be recognized on our Madison County Resource Management Facebook page, Instagram, and website. Winning entries will also be displayed in-person at the County Administration Building.

ENTRY REQUIREMENTS

- Entries must be completed by a student in grades K-12 at a school in Madison County currently enrolled in the Green Schools Program.
- No copyrighted material, characters, companies, or computer graphics can be used.
- Entry forms must include a list of the items used.
- Each student must submit a completed entry form along with a photo (up to three photos can be submitted with each entry). You should not include any faces in the photo submissions.
- There are no size restriction on entries, however the finished design should be able to be transported if selected as a winner to be displayed at the Madison County Administration Building.

GRADE LEVEL CATEGORIES AND PRIZES (VISA Gift Cards)

1

First Place- \$125	First Place-\$125	First Place- \$125	First Place-\$125	
Second Place- \$100	Second Place- \$100	Second Place- \$100	Second Place- \$100	
Third Place- \$75	Third Place- \$75	Third Place- \$75	Third Place- \$75	
Fourth Place- \$50	Fourth Place- \$50	Fourth Place- \$50	Fourth Place- \$50	
Fifth Place- \$25	Fifth Place- \$25	Fifth Place- \$25	Fifth Place- \$25	

JUDGING PROCESS: A panel of judges will select the top five winners for each grade level category. Once selected, the top five winners of each category will be notified via the email provided on the entry form. The winners will be invited to have their entries displayed at the Madison County Administration Building. Each entry will be judged based on the following criteria:

- Addresses the category theme
- Creativity
- Originality
- Entry form is complete

Extra Resources and Ideas for Inspiration!

Check out this Pinterest Board for some inspirational ideas!

https://www.pinterest.com/blutz2/upcycling-innovation-challenge/

How to make a Candy Wrapper Purse

https://www.youtube.com/watch?v=8of0x63XaD0

Examples of Upcycling

https://upcyclemystuff.com

How to make a plastic bag basket

https://www.instructables.com/Make-a-basket-out-of-plastic-

bags/?utm_content=buffereda84&utm_medium=social&utm_source=pinterest.com&utm_campaign=buffer

Not sure where to start?! Think about these themes for the challenge.

ECO-FASHION

Think about items that you can wear or carry as an accessory. Examples would include a dress, shirt, vest, bow tie, purse, earrings, shoes, etc.

AROUND THE HOUSE/SCHOOL

Think about things in your home or at school. Examples might include a flower pot, jump rope, bird house, bag, coasters, etc.

ART

Not all master pieces are created with paint and a paint brush. Think about how you can use unwanted items to create a beautiful piece of art work.

THE MADISON COUNTY GREEN SCHOOLS PROGRAM PRESENTS THE FIRST ANNUAL

iCOMPOST CONTEST

Jt's Compost Time!

Composting is the natural process of recycling organic matter, such as leaves and food scraps, into valuable fertilizer that can enrich soil and plants. Composting helps to save landfill space and lower your carbon footprint.

International Composting Awareness Week is May 1st-7th this year and we are celebrating with this annual contest open to all Madison County students in grades K-12th. Participating students must be enrolled at a 2022 Madison County Green School. Students should design a <u>poster or video</u> (based on their grade level outlined below) that showcases the benefits of composting. Winning students will receive a Dual Chamber Composting Tumbler.

K-5th Grade

Students should <u>design a poster</u> that emphasizes the importance of composting as well as the benefits of composting. Designs should bring awareness to this important action and how it helps our environment.

- Students should complete the entry form and submit it along with their poster
- Posters should be designed on 8"x11" paper
- Use a combination of words and/or phrases
- Two winners will be selected, one K-2nd grade student AND one 3rd-5th grade student

6th-12 Grade

Students should <u>create a video</u> that emphasizes the importance of composting as well as the benefits of composting. Videos should bring awareness to this important action and how it helps our environment.

- The video should be between 30-60 seconds in length and should state their name, school, and grade level.
- Entry forms should be mailed or emailed
- Two winners will be selected; one 6th-8th grade student AND one 9th-12th grade student

- All entries must be received by no later than 4:00pm, April 22nd, 2022.
- A panel of judges, Building and Zoning staff will select the top winner from each category and the winners will be notified via the email provided on the entry form.
- All entries will be judged based on creativity and originality.
- Students must be enrolled at a participating 2022 Madison County Green School.
- All work must be original and no copyrighted images may be used.
- Entries without a completed entry form will not be judged.

Please view the Composting 101 flyer for tips and tricks on how to create and maintain a compost pile. You can also visit epa.gov/recycle/composting-home for more composting information.

MADISON COUNTY GREEN SCHOOLS PROGRAM 2022 PhotoVoice: Picture that Green! Competition

Competition Summary

The annual Madison County Green Schools Program Photovoice Competition is a way to make your voice heard through photography as you document the community's needs and resources from your own personal experience. Students should photograph a scene that represents their community or expresses their point of view as it relates to sustainability and the wise use of our land, air, or water.

Photographs might include subjects such as:

- Human activities and habits that support or are possible because of healthy land, air, and water.
- Agricultural practices that support a healthy and thriving Madison County.
- Favorite places to explore outdoor Madison County, particularly those that might represent local plants, animals, or habitats that are carefully managed or conserved.

Single photos must be accompanied by a typed 4-5 sentence paragraph describing of the photograph, outlining what the image depicts and how it relates to sustainability/thoughtful management of our resources. Photos must be taken of subject matter within Madison County. All submissions must be from students whose schools are currently enrolled in the Madison County Green Schools Program. If you are not currently enrolled, participation is simple. Please contact Program Coordinator Bailey Lutz at bnlutz@co.madison.il.us.

Categories

6th-8th Grad	e Individual
--------------	--------------

9th-12th Grade Individual

Awards (one per category): 1st Place = \$100, 2nd Place = \$75, 3rd Place = \$50

Eligibility

- Students must be currently attending 6th-12th grade at a public, private, or parochial school in Madison County.
- Participating students' schools must be enrolled in the Green Schools Program.
- All photographs must be taken within Madison County.
- Limit 2 entries per photographer. Each entry must be submitted separately.

Submission Requirements

- 1) All entries must have: A title AND a 4-5 sentence description that states what the photographer is depicting in their photograph.
- 2) Entry Requirements:
 - a. All entries must be submitted online at https://www.surveymonkey.com/r/PhotoVoice2022
 - b. Image must be no larger than 16MB.
 - c. Minor digital enhancements for cropping, red-eye removal, filters, and corrective functions are permitted, but images that have been judged to be altered in any significant manner will be disqualified.
 - d. No borders, frames, or backgrounds, watermarks, dates, or signatures may be placed on the photos.
 - e. Images must be entered in JPG format.
 - f. No depiction of copyrighted materials, logos, or trademarks.
- 3) All entries are due March 31st, 2022 by 5:00 pm.

Entrants grant permission to Madison County Government to reproduce images for exhibitions, Madison County Government publications, and promotional purposes. All reproductions will become the property of Madison County Government. All photographs utilized in Madison County Government productions will be properly credited to the appropriate person. Submission of the image(s) implies entrant's acceptance of all of the above conditions.

Evaluation Criteria

Photos will be judged on criteria including, but not limited to:

- 1. Adherence to competition theme.
- 2. Evident connection between photo, title, and written essay
- 3. Originality and creativity
- 4. Visual interest and audience appeal
- 5. Sharpness and clarity of images
- 6. Composition, color, and lighting
- 7. Clarity of expression of written essay
- 8. Creativity
- 9. Overall Impact of photo and essay

Helpful Hints

As you plan for your PhotoVoice entry, keeping the following tips in mind will increase your chance of creating a winning submission:

- 1. It's easy for judges (and other viewers) to spot the difference between a photograph that's been thought out and planned carefully, and one that was snapped without much forethought. Take your time to set up the shot and find the right angle and lighting. Snap several images and spend time reviewing them before selecting your submission. Ask others for their opinions and re-shoot if you need to.
- 2. While candid, in-the-moment photographs of living things can make for stunning images, make sure that your essay reflects thoughtfulness and demonstrates a strong connection to your photograph. Beautiful photographs that are accompanied by weak or vague explanations won't be scored as highly as submissions with strong essays.
- 3. Think about your title. Just like a good photograph, the details of your submission make a difference. Your title is an opportunity to show humor, cleverness, or help your audience connect to your work.
- 4. Consider what moves you. You may want to take some time reviewing other award-winning photographs (try www.nikon-photocontest.com) and take note of what captures your attention. Chances are, something that "wows" you will get a similar reaction from your audience once you're behind the camera.
- 5. Think first. Ellie Bozarth, the 2017 first place PhotoVoice winner, took time to consider the concept of resource management and what sustainability means to her *before* taking photographs. Ellie thought about her own interests and connections to sustainability and how it relates to Madison County. The result was a fantastic photograph of a local honey-producer's bees and an essay that showed thoughtfulness, planning, and personal connections.

RESOURCE MANAGE-MENT UPDATES MADI-SONCOUNTYBZ.COM

Spring Brings Many Things.

× Sneezing × Planting
× (leaning Flooding?)

Learn why seasonal changes bring increased flood risk.

Spring brings warmer weather but also plenty of rainfall, melting snow, and ice jams. The result of runoff can cause severe flooding in your community.

Warmer temperatures can result in storms that carry more water and move at a slower rate, This means a concentrated area may get heavier rainfall for a prolonged period, increasing the risk of flooding.

The combination of melting snow and heavy precipitation in the Spring increases the risk and severity of flooding. Snowmelt happens when the ground is still frozen and unable to absorb the excess water, creating runoff that can overflow nearby streams, rivers, and lakes. Ice jams can cause flooding upstream as rivers overflow their banks. When the jam eventually breaks free, it may cause flash flooding downstream.

Just one inch of floodwater in your home can cause up to \$25,000 of damage or more. Most renter, homeowner, & business insurance policies do not cover flood damage, and a policy takes 30 days to go into effect.

While federal disaster assistance may be available after flooding, FEMA's Individual and Household program is only available if the President declares a major disaster declaration and provides less financial assistance than flood insurance

MS4 Quarterly Meeting Review

A featured topic during the March Steve Brendel presented the required changes and information regarding the MS4 Program's Annual Report, which is due prior to June 1st of every year. IEPA requires members of the Co-Permittee group to maintain records of these Annual Reports for a minimum of 5-years, as well as make this information public by posting it on the members websites.

In addition to review of the Annual Reports, which are being prepared by Gonzalez Companies, LLC., Gonzalez representative, Tony Schenk, provided a refresher on the requirements for both wet and dry weather storm water sampling. These samplings are intended to provide an insight to Illicit Discharge Detection and Elimination (IDDE). IDDE is one of the six minimum control measures the group is required to implement within the MS4 program.

Quarterly Meeting was ILR40 Permit annual Operations & Maintenance Training.

Brandon Banks reported that 1,500 Christmas Trees were collected during the County's annual collection and 361 households were serviced at the March E-waste collection. Upcoming E-waste collections are noted on the front page of this newsletter.

Madison County Illicit Drainage Labeling

Madison County Stormwater Management proposes a drainage labeling program to help deter illicit discharges into the stormwater receiving systems within the County. The storm drain clean-up and labeling motto is "Only Rain Down The Drain". The proposal states that the first year, 2023, half of the Co-Permittee Group will participate and the following year, the other half will participate and continue in alternating years. This program meets two of the minimum control measures for the group, both public outreach and education, as well as illicit discharge detection and elimination.

Co-permittee members who are interested can sign up at the MS4 meetings or through email. The County will talk with individual members to choose a date and time for their event. It is also suggested that the Green Schools Coordinator help out with inviting grade schools to participate. The County has volunteered to help out with the public involvement aspect by providing flyers, newspaper advertisements, and online announcements. The County will bring materials such as stencils, brushes, paint, paint trays, and trash bags for litter clean up. The County will map out target areas for the Co-Permittee members to focus on. The timeline for events is recommended to be scheduled between May and October. These events will be held on a first come, first served basis. Whoever decides earliest to utilize this service from the County will be scheduled first.

SPOTLIGHT SEGMENT

Village of Godfrey — Stormwater BMP Guide for Residents

In an effort to provide resources and information to its residents the Village of Godfrey drafted a manual highlighting several BMP techniques that residents can utilize to promote stormwater management and pollution control.

The manual provided information on the importance of stormwater BMPs includina:

- Rain Barrels
- Permeable Pavements
- Rain Gardens
- Natural Landscaping
- Bioswales
- Bioretention Basin
- Stormwater Friendly Lawn Care

The guide provided easy to follow procedures for implementing the BMPs including a background, a section on "how it works" and a guide to pick an appropriate BMP for the residents particular situation. As a member of the MS4 Co-Permittee Group, the Village of Godfrey was able to share this valuable resource with the rest of the group. More information on Stormwater Best Management Practices can be found on the Village's website at:

Stormwater-Best-Management-Practices.pdf (godfreyil.org)

For other great resources and events consider joining Madison County's public Facebook Group - Madison County Clean Communities!

MS4 Quarterly Meeting Review

A featured topic during the December Gonzalez Companies has resources available Quarterly Meeting was a presentation on Post for the group to help comply with permit Construction Stormwater Management and requirements Green Infrastructure, one of the six minimum prevention in the waterways within Madison control measures implemented by the Co- County. Permittee Group.

Tony Schenk, P.E., provided the group several resources that they could use to develop and implement these important BMP's. More information about Green Infrastructure and some of these resources can be found on EPA's website below, which can also be found by searching "Green Infrastructure, EPA".

Green Infrastructure | US EPA

The Co-Permittee group was also reminded of several required activities including: wet and dry weather storm water sampling, annual public meetings and record keeping requirements.

For more information on these resources contact Tony at: tschenk@gocos.net

2022 Prescription Drug Take Back

https://www.collinsvilledailynews.com/news/madison-county-s-prescription-drug-take-back-day-is-this-weekend/article_dfd79d52-552d-11ed-af43-f3383108a1b6.html

Madison County's Prescription Drug Take Back Day Is This Weekend

Oct 26, 2022

EDWARDSVILLE - Madison County's law enforcement agencies, in cooperation with the U.S. Drug Enforcement Administration, will operate a drop-off site for Prescription Drug Take Back Day on Saturday, Oct. 29, in Edwardsville.

Madison County State's Attorney Thomas A. Haine, Sheriff John Lakin and Coroner Steve Nonn will be operating the drop-off site in coordination with the DEA. The drop-off site, open from 10 a.m. to 2 p.m., will be in the Madison County Administration Building's back parking lot on Second Street in Edwardsville: Madison County Administration Building, 157 North Main Street, Edwardsville, IL 62025.

Haine said the event is "a great way for local residents to help fight the overdose epidemic and save lives."

Lakin added, "I encourage local residents to take advantage of this opportunity to dispose of unneeded medicines in a way that is healthy and safe."

Nonn said, "So many tragic overdose deaths could have been averted if unneeded prescription drugs had been disposed of properly."

The Prescription Drug Take Back Day provides an easy, no-cost opportunity to dispose of medicines stored in the home that are susceptible to abuse and theft. The majority of opioid addictions start with prescription pills found in medicine cabinets at home.

Pharmaceutical drugs can be just as dangerous as street drugs when taken without a prescription or a doctor's supervision.

Items that can be accepted at the event include: Prescription medication including controlled substances

Over-the-counter medications

Vitamins Items that cannot be accepted include:

Any illicit drugs. (These substances can be turned over to a police department at any time.)

Sharp objects, including needles, auto-injectors, etc. Please check with your waste disposal company to learn their procedures for the safe disposal of these items.

Liquids not secured in a leak-proof container.

Biohazardous materials.

Glass objects, including thermometers or other medical devices.

Aerosols, including inhalers. Since 2010, DEA, along with its law enforcement partners, has collected nearly 16 million pounds of unneeded prescription medications.

2022-2023 Christmas Tree Recycling

Madison County to host its 25th year of Christmas Tree Recycling Collection

In coordination with Madison County Building & Zoning, townships and municipalities throughout the county are providing 34 drop-off sites for residents to dispose of their Christmas trees.

The Christmas Tree Recycling Program has operated successfully for the past **25** years in Madison County. The recycled trees are chipped into mulch and used in public gardens and parks across the community.

Rather than toss the tree in the trash, take it to a recycling location. Trees will be accepted from Dec. 26 through Jan. 14, 2022. All lights and ornaments must be removed prior to drop-off. Pine wreaths, pine roping, or other landscape waste is prohibited.

Building & Zoning created a downloadable holiday recycling guide on its Recycling 101 page. (https://bit.ly/2T0j4On) The guide depicts which holiday items can and cannot be placed in single-stream recycling.

Other common holiday items such as burnt out Christmas light strands, plastic bags, bubble wrap, and plastic air pillows are recyclable but not in your single stream bin. These items can be dropped off at recycling bins found at many local stores. For additional information, www.earth911.com is a great resource to find drop off locations for these items locally.

More information, visit the county website: https://bit.ly/3IS7mX4

September 9, 2022 FOR IMMEDIATE RELEASE

INDIAN-CAHOKIA CREEK WATER QUALITY IMPROVEMENT PROJECTS FINANCIAL ASSISTANCE PROGRAM SIGN UP

MADISON COUNTY, ILL. — A sign-up period is now open for landowners in the Indian-Cahokia Creek Watershed to apply for funding from a financial assistance program through HeartLands Conservancy. This financial assistance comes from a grant of over \$830,000 from Illinois EPA Section 319 Nonpoint Source Pollution Control program and Madison County. HeartLands Conservancy recently received this funding to go towards watershed improvement projects in the Indian-Cahokia Creek Watershed.

The area eligible for financial assistance is in north-central Madison County and southern Macoupin County. The area includes all or parts of the following municipalities: Bethalto, Bunker Hill, Dorchester, Dorsey, Edwardsville, Glen Carbon, Hartford, Holiday Shores, Prairietown, Roxana, South Roxana, Staunton, Wilsonville, Wood River, and Worden. A map of the eligible area is located here: https://heartlandsconservancy.org/water/INDIAN-CAHOKIA-CREEK-WATERSHED

HeartLands Conservancy is seeking landowners to voluntarily install water quality improvement projects, called best management practices (BMPs), in the watershed to reduce nonpoint source pollution, soil erosion, and nutrient and sediment loadings.

The following practices eligible for financial assistance include:

- Grassed waterways
- Ponds
- Water and sediment control basins

- Wetland restoration
- Shoreline stabilization
- Stream channel stabilization
- Streambank stabilization
- Bioswales
- Cover crops
- Sediment Basin

The financial assistance program will reimburse 50% of construction costs on selected projects started and completed during the grant period. Unfortunately, not all projects can be funded. Projects will be selected based on their pollutant reduction, cost, and other criteria.

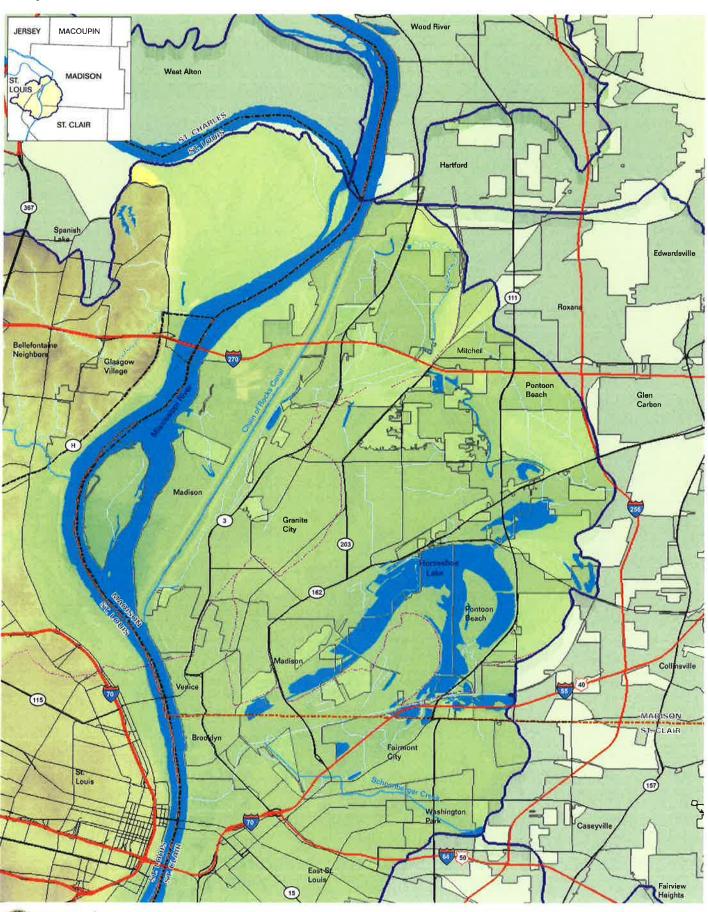

The sign up period is open from now until October 31, 2022. Projects will be selected and built as funds allow. If funds are still available after all initially selected projects have been approved, another sign up period will be announced at a later date.

For information and updates on this project and to find out if your property is in the watershed, view the watershed map available at:

https://heartlandsconservancy.org/water/indian-cahokia-creek-watershed/

For additional information on Illinois' Nonpoint Source Management Program and the 319(h) Grant Program, please visit: https://www2.illinois.gov/epa/topics/water-quality/watershed-management/nonpoint-sources/Pages/default.aspx.

2022 Recycling and Resource Management

RECYCLING CAMPAIGNS & OUTREACH

Recycling and Resource Management

Where can I recycle the following?

Basic materials: For those who do not have access to curbside recycling services, items such as paper, glass, plastics, and metals can be recycled in drop-off stations.

Drop-off stations can be found in the following locations:

- Edwardsville: 2500 Troy Road, *Home Depot parking lot, serviced Monday through Friday*. NOTE: This container is not available on weekends and is removed from the location at 10 a.m. on Fridays.
- Alton: 400 Piasa St., downtown Alton across from the federal building, serviced Monday, Wednesday, and Friday.
- Collinsville: 1600 Olive St, at Fletcher Field Parking Lot, serviced Monday, Wednesday, and Friday.
- Hamel: 403 Old US Route 66, Located at the Township maintenance shed and Hamel Community Fire Protection District Office, serviced Mondays and Fridays.
- Marine: 630 W Leopold St., Off Leopold, behind Marine Township Highway Garage, just past Vernon, serviced Mondays and Fridays.
- Maryville: 8 Schiber Court, Off Vadalabene, by Drost Park, Public Works Department, and Community Library, serviced Mondays and Thursdays.
- New Douglas: 8363 East Frontage Road, Across I-55 from the Pink Elephant Antique Mall, off Alhambra Road, serviced Tuesdays & Fridays.

Find a Recycling Station near you!

An interactive map of the recycling drop-off locations can be found here – GIS Viewer.

What materials can I recycle through curbside service?

Curbside Service: Materials accepted in curbside bins vary depending on the hauler. For residents whose recycling services are provided by Republic/Allied Waste, a PDF of accepted materials can be found here.

Other recycling questions? Contact Brandon Banks at 618.296.5237 or email recycling@co.madison.il.us.

Where can I recycle materials NOT allowed through curbside service?

Plastic Bags and Wraps: Click here to visit the drop-off directory at Plastic Film Recycling.org.

Christmas Trees: Click <u>here</u> for a list of locations that offer seasonal Christmas tree drop-offs for residents.

Household Hazardous Waste: click here for information on Madison County's next HHW collection.

Electronic Recycling (E-Waste): click <u>here</u> for information on Madison County's next E-Waste Collection.

Other items not listed: If you are unable to find information on the items you wish to recycle listed on the Madison County Recycling Resource List, try <u>Earth 911</u>'s searchable database to find the nearest collection location.

About Madison County Recycling and Resource Management

What is the purpose of Madison County Recycling and Resource Management?

The purpose of the recycling and resource management program is to improve quality of life for Madison County residents, businesses, schools, and local governments through programs that foster healthy, resilient, connected communities.

Madison County is a regional leader in recycling and resource management initiatives. Our innovative programs have received great success in recent years and we continue to build on them.

The program serves Madison County communities through a wide range of strategies that promote wise use of resources and awareness of solid waste-related issues and options. These practices result in healthier communities, reduced waste, and cost savings for all members of the county and metro-east region. This approach helps residents make informed choices that contribute to a greater quality of life for those who live and work in Madison County and serve to attract an increased number of potential new residents and businesses.

Madison County Recycling and Resource Management Initiatives

How does Madison County manage solid waste?

State and local laws mandate that a minimum of 25% of the entire solid waste stream be recycled. To satisfy these mandates, Madison County Planning & Development manages solid waste disposal and supplementary options such as recycling and composting in the county.

Today more than 35% of all household trash in Madison County is recycled, while the state's rate is about 37%. Within Madison County government buildings, more than 85% of waste is recycled. These numbers continue to increase as the county works toward a goal of zero waste in the future.

Not only does recycling divert materials out of the landfills, thereby helping Madison County meet the state mandated 25% diversion rate, it also promotes jobs in our county and provides commerce.

Primary functions of Recycling and Resource Management initiatives include:

Waste & Recycling Haulers: Managing the issuance and enforcement of certifications for county waste and recycling haulers.

County-wide Recycling Drop-off Locations: The department funds six drop-off recycling stations throughout Madison County so that residents without curbside recycling have a place to take their recyclable materials.

Recycling Resources & Hotline: Resources regarding how to safely and properly dispose of items not accepted in the curbside or drop-off bins.

Medication Collection and Recycling: Old and unused medications are collected and recycled to protect water quality and preserve public safety. With the assistance of the Madison County Sheriff's Department, the Building & Zoning Department funds collection and recycling of medications at local police departments.

Community Clean-ups & Collections: Special free recycling events reduce the problem of illegal and roadside dumping within the county. These include community clean-ups, disposal of electronic waste and tires, and Christmas trees, among others.

General Composting: <u>Download your Composting Fact Sheet</u> courtesy of Madison County's Small Green Steps.

Pumpkin Purge Community Composting Program: Part of a state-wide initiative, the pumpkin composting program provides an opportunity to drop off old pumpkins and gourds for composting which, in turn, keeps them out of local landfills.

Support for Madison County Communities

How does Recycling and Resource Management support local communities?

Resource Management Grants: Supports units of local government with solid waste management, air quality initiatives, energy efficiencies, smart growth, and stormwater projects. Find out more about the 2022 Environmental Grant by clicking here.

Green Cities Challenge: Sponsors local municipalities' participation in the Green Cities Challenge to foster incorporation of thoughtful policies and practices within local government operations. In 2015, Alton and Highland participated, while in 2016, Granite City joined the two other communities. In 2019, Madison County grew the program to six communities in the challenge, including Alton, Collinsville, Granite City, Glen Carbon, Godfrey, and Edwardsville.

Internship Program: Works with local Universities to provide ongoing education in a real-world setting.

Public Outreach & Engagement: Providing additional information on a wide range of issues allows residents to understand and address issues within their own neighborhoods and take part in land use processes. Several educational formats exist including:

- OneSTL: In 2019, Building & Zoning began a bi-state partnership with OneSTL in efforts to plan for sustainable development that includes a vision, goals, and objectives that outline a positive future for our communities. Learn more about our partnership here.
- Public Presentations: Building & Zoning staff are available to provide talks to local schools, clubs and organizations.

- Newsletters & Informational Handouts: A department-wide Monthly Report along with other informational fliers, brochures, and newsletters convey timely information about events, programs and statistics provided by the department. To see past reports, click here. To be added to the recipient list for updates contact Recycling and Resource Management Coordinator, Brandon Banks at 618-296-5237.
- Local Events: Providing support, planning, and participation in a number of regional and state-wide events.
- Air & Health Forum: An annual health and wellness-themed dialogue focusing on the connection between obesity, nutrition, air quality and the environment, aimed to engage the community in local and healthy options and solutions.

Green Schools Program

How does Recycling and Resource Management support quality of life for students and children?

The award-winning Green Schools Program supports over 80 public, private and parochial schools within the county and impacts over 26,000 students to create resource-efficient schools that educate students about maintaining and promoting a healthy community. To find out more about the Madison County Green Schools Program, click here.

Long-term Planning

How is Madison County planning for the future?

Madison County Building & Zoning is completing a county-wide resource management plan that addresses best management practices ranging from air quality, to ecological health, to growth of green businesses.

Intra-government Resource Management

How does Madison County practice recycling and resource management within its own organization?

Recycling and Resource Management works in cooperation with other county departments to provide a variety of wise use initiatives including:

County Building Recycling: Numerous options exist for staff to recycle an assortment of

materials used in day to day operations. There are also opportunities for the public to drop off materials such as cell phones, eye glasses and shoes. Contact Recycling and Resource Management at (618) 296-5237. Click here to view the visual guide to Madison County building recycling.

St. Louis Green Business Challenge & County Green Team: The Madison County Green Team was started as part of the St. Louis Regional Green Business Challenge and includes representatives from multiple county departments. The team continues to develop the in-house resource management strategy including improvements to the County's ongoing recycling efforts, options for energy efficiency, a green purchasing policy, and general resource management that will save both money and meet objectives.

MS4 Update 6.8.2022

Ewaste Flyer – Collection Next Saturday 18th – TV's anything with a cord- Free Collection (Sign up soon recommended)

HHW Flyer – Have seen an increase in rates over the Spring cleaning season. Next Collection this Saturday 11th (weights have doubled – **April Largest Month by volume**)

Clean Communities Program – 900 Kits distributed.

- Working with folks at Republic to continue cracking down on the causes of litter. Tarping, general consolidation of trash. Meet Quarterly
- Plenty of supplies for clean up

Environmental Grant project 3 of our the 11 are completed

- Bethalto HVAC retrofit -Removed old furnace and air conditioning at Village Hall
- Nameoki Stump grinder for retention ponds, parks and roadway improvements.
- New Douglas Energy Efficiency Project HVAC improvements at Community center

If you are interested in the 2023 Grants 20% matching, please reach out to me in the 3rd quarter to keep a look out on our website. Those RFP's typically go out sometime in October

Also be on the lookout for the **municipal tire collection** usually first week in October. Take care of disposal.

Community Clean ups – hosted 2 this quarter **(New Douglas & Olive Townships)** projected at least 2 more next quarter.

• These are bulk clean ups, typically provided 2-4 40yrd roll offs (as needed) during the week event. Very successful. No cost to townships.

•

Education: Part of our required public outreach and educational programs.

Recycling Campaign – increase recycling rates, decrease contamination. Post every day on our social media channels regarding recycling questions and general infographics

 We recently seen county recycling weights tick down. Leading us to believe less folks are recycling creating more waste going into our landfill and waste streams. Which we

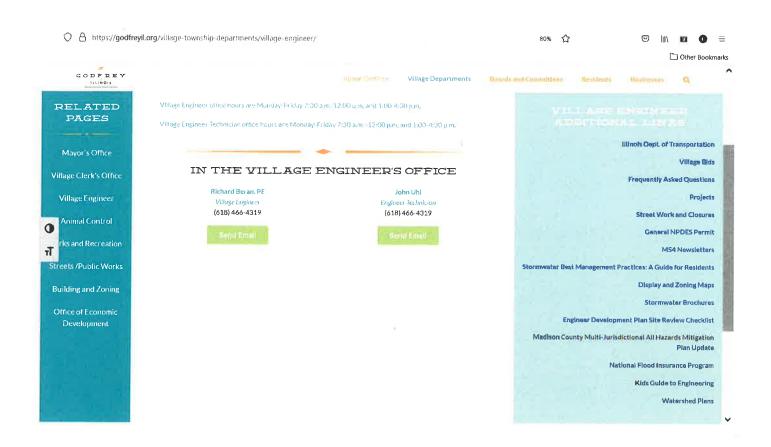

Arlington Burn video – Worked with Heartlands Conservancy in April for Prescribed Burn

Part of our required public outreach and educational programs.

Resource Management MS4 Meeting Recap

- Final E-waste Collection
 - o October 22nd, 2022
 - o Appointments required
- Household Hazardous Waste permanent site current operating at limited capacity
 - o Still open
 - Temporarily Limited Items: Pesticides, herbicides, lawn fertilizers/chemicals, pool chemicals, and medicines
- Used Tired Collection for Government Entities.
 - o October 6th & 7th
 - o Free Drop off at Nike Base Storage Facility
- 2023 Environmental Grant RFP's released early November
 - o \$15,000 Matching Grant. Can be paired with Federal Grants
- Federal Grants Grants.gov
 - o Extensive funding available over the next several months. (Highly encourage)

Introduction: The Importance of Stormwater Best Management Practices (BMP)

In the past, stormwater management held that water was a problem to solve rather than a valuable resource to conserve. Stormwater Best Management Practices can be an environmentally-friendly means to moderate the effects of stormwater during rainfall events. The Village of Godfrey developed this guide to address stormwater quality and quantity issues and to help residents better manage stormwater on their property. This guide, highlighting different practices and options in managing stormwater, is intended to be a first step in addressing the challenge of better managing stormwater. Specifically, it provides guidance to residents on methods to protect our water resources by reducing the amount of stormwater draining into the stormwater sewer systems and local waterways.

Stormwater runoff from developed land, when not effectively managed, causes a number of problems. Increased stormwater runoff is caused principally by impervious (impenetrable) surfaces such as conventional rooftops, parking lots, roads, alleys, driveways and sidewalks. A combination of gutters, sewers, and channels which are designed to rapidly move stormwater away from developed sites may exacerbate downstream effects due to a large and rapid influx of water. This conventional method also does not take advantage of the opportunities for water to naturally soak into the ground, where it is stored and naturally filtered by native vegetation.

Fortunately, there are alternatives to traditional drainage techniques to emulate natural systems that can reduce quantities and rates of surface runoff and reduce pollutants under certain circumstances. These alternative drainage techniques are called Best Management Practices (BMPs) and are designed to retain rainwater where it falls. The goals of BMPs are to reduce the amounts and rates of stormwater runoff, and to use the landscape and soils to naturally move, store and filter stormwater runoff before it leaves the site.

This guide will provide residents with six specific stormwater BMPs that are small-scale and can be used by homeowners everywhere; even on small residential lots.

To the right is an example of a bioswale that is designed to effectively move water from one area to another, while filtering potentially adverse pollutants.

Pinehurst Seattle http://www.pinchurstseattle.org/2008/08/15/pretty-bioswales/

Stormwater Best Management Practices for Residents

I. Rain Barrels and Downspouts

Background - Rain barrels are a low cost and common property-level stormwater management practice that allow for collection and storage of rainwater from rooftop downspouts for uses such as irrigation. The typical volume of a rain barrel varies between 55 and 90 gallons and generally costs between \$120 and \$200.

How it Works - Normally, roof runoff is routed via downspouts directly across lawns or into vegetated areas. Rain barrels act as a holding tank for water directly from downspouts, and can capture and store the runoff from small storms. The stored water can then be used to irrigate lawns and landscaped areas in between storm events. This can ultimately reduce the amount of stormwater runoff during a storm event. The effectiveness of rain barrels is a function of their storage volume in comparison to the size of the roof and the size of the storm. While the volume of rainwater stored in a rain barrel will not

substantially reduce flooding from moderate or large storms, it can reduce direct runoff from smaller storms.

Applicability – Downspouts traditionally require proper grading to shed water and landscaping or vegetation available to accept the water. Rain barrels are best utilized where vegetation is limited. Rain barrels can be installed with minimal effort by residents without professional assistance.

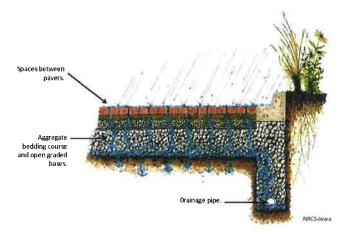

https://www.hgtv.com/outdoors/gardens/plantingand-maintenance/how-to-make-a-rain-barrelpictures

II. Permeable Pavement

Background – Permeable pavement refers to paving materials, typically pavers or stone, which promote infiltration of stormwater into a subbase reservoir.

Permeable pavements involve construction of a permeable pavement surface over an underlying base that allows stormwater storage, thus reducing runoff volume.

Paving blocks and grid-type geometrics are the most common and available type of permeable paving. These designs contain openings that are filled with sand and can

also support grass or other suitable vegetation, thus providing a green appearance. Permeable pavement is effective in reducing the quantity of surface runoff, for moderate storms if the rain volume is equal to or less than the storage volume. Similarly, it reduces the runoff pollutants associated with these events. Permeable pavement also may have aesthetic advantages over conventional paving, depending on the materials used. Permeable concrete and asphalt surfaces can also be constructed.

How it Works – Permeable pavement works when a portion of rainfall infiltrates through the pavement surface into the underlying open graded sub-base reservoir, as shown in the photo above. This water would otherwise be blocked by non-permeable pavement, such as asphalt. Permeable pavement is most effective when the layout maximizes the openings between the paving blocks and provides an effective permeable sub-layer of at least 12 inches in depth.

Applicability —Permeable paving is particularly appropriate for driveways. Conventional driveways can be replaced with permeable pavers to allow stormwater runoff infiltration into the underlying ground. Permeable paving blocks may require occasional mowing and snow plowing may require special care due to the slightly uneven surface of the pavement. Permeable pavement also requires periodic vacuuming to maintain permeability. Permeable paving can cost two to three times more than

conventional concrete of asphalt.

Rivers Research and
Education Center

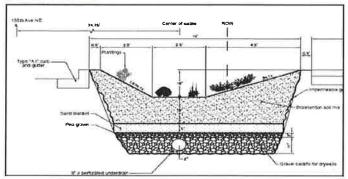

https://www.lc.edu/uploadedImages/Pages/Community_and_Visitors/Community_Impact_and_Outreach/fieldstation.jpg

III. Rain Gardens

Sightline Institute

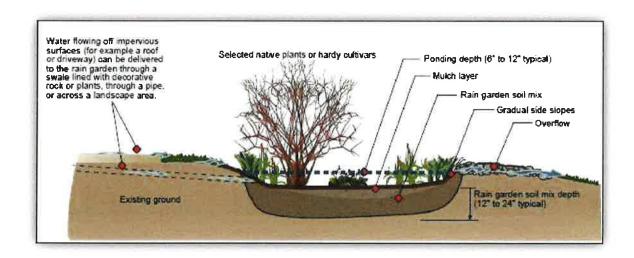

http://www.sightline.org/2013/05/23/redmonds-rain-garden-challenge/rain-garden-cross-section/

Background – Rain gardens are property-level stormwater control measures that use specially-designed gardens to collect, store, and infiltrate stormwater from impervious surfaces such as rooftops, driveways, and heavily-compacted lawns. Rain gardens are typically planted with deep-rooted native vegetation such as wildflowers, sedges, rushes, ferns and shrubs that can withstand both dry Augusts and submergence by heavy June rains.

How it Works — Rain gardens are a type of bioinfiltration that relies on the underlying soils for drainage, where native water-tolerant plants absorb the stored water through their roots. During small to medium storm events, rain gardens allow for absorption of stormwater into the ground, diverting water from existing storm sewers. Aside from their stormwater benefits, rain gardens can be aesthetically pleasing and can provide a natural shelter and food source for wildlife and insects.

Applicability - When creating a rain garden, a combination of shrubs, grasses and flowering perennials are best and should consist of native wetland and prairie grasses. Suggested plants for a rain garden in the Midwest include: Black-eyed Susan, Butterfly weed, Golden Alexander, Obedient plant, Purple Coneflower, Wild Columbine and Wild Geranium. Rain gardens can be incorporated into front and back yards of residential properties. Once established, rain gardens require various amounts of annual maintenance which may include weeding and reestablishing plants as necessary.

Chesapeake Stormwater Network

http://chesapeakestormwater.net/be-bay-friendly/rain-gardens/

IV. Natural Landscaping

Background – Natural landscaping refers to the use of native vegetation, particularly prairie, wetland and woodland species, on a residential property as a low-cost alternative to traditional landscaping with turf grass and ornamental plantings. A property that is naturally landscaped, if specially designed, emits less stormwater runoff than a conventionally landscaped yard. Additionally, natural landscaping needs less fertilization and can reduce pollutants associated with urban runoff through filtration in the ground for small rainfall events.

How it Works — Native vegetation enhances both absorption of rainfall and evaporation of soil moisture due to extensive root systems that extend down 3-10 feet. On the other hand, traditional landscaping that utilizes turf grasses where root systems extend only about 3-4 inches into the ground. Natural landscaping provides other benefits in addition to reducing stormwater runoff. Native plants help stabilize soils with their deep roots which helps prevent soil erosion. Also, native landscapes result in reduced maintenance needs over time.

Applicability – Natural landscaping can be implemented on almost every property as an alternative to traditional landscaping. Native plant species can be used to replace wood-chips in berms or outer edges of a property. Native landscaping should be tailored to individual site characteristics while factoring in topography, soils, drainage patterns and sun exposure. Once implemented, natural landscaping should require much less maintenance that traditional landscaping including less irrigation, mowing, fertilizer and pesticide application.

http://landscaping11b.blogspot.com/2014/07/urban-front-yard-landscaping-ideas.html

V. Bioswales

Background — Bioswales are broad, vegetated channels used for the movement and temporary storage of runoff. Bioswales are designed to move a portion of runoff into the ground and filter out runoff pollutant through use of native vegetation.

How it Works – As an effective alternative to enclosed storm sewers and lined channels, bioswales function to move runoff from a developed site to a naturally draining area. On some sites, natural drainage courses may still be present and it is recommended that they be retained as part of the site drainage plan. Bioswales are designed to locally reduce both the rate and volume of stormwater runoff.

Applicability – Bioswales can be created on almost every property. Homeowners can construct bioswales to divert water from high runoff areas to more permeable areas designed to hold water, thus diverting runoff away from storm sewers. This can be done through the combined use of native vegetation, soil and aggregate.

Photos courtesy of Nate Keener

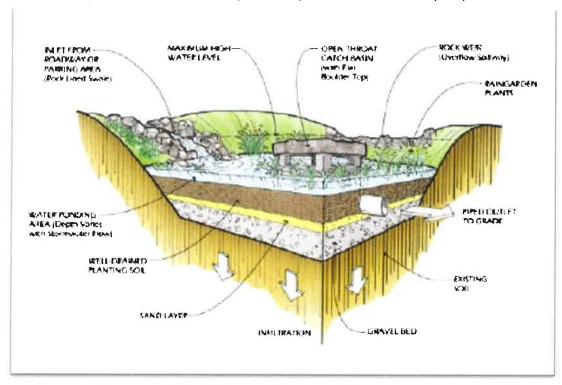

VI. Bio-Retention Basins

Background – Bio-retention basins are infiltration devices used for the treatment and infiltration of stormwater runoff. A bio-retention basin is typically made up of multiple layers, which treat stormwater as it is filtered. These basins can, under certain circumstances, remove pollutants in stormwater and reduce runoff volumes. Bio-retention basins are designed to prevent flooding by temporarily storing stormwater runoff and releasing it gradually to the downstream drainage system. Thus they must provide larger amounts of storage and volume. In addition to flood prevention, bio-retention basins can also remove pollutants and create wildlife habitat.

How it Works – Bio-retention basins can reduce runoff rates and mitigate some of the stormwater runoff increases in developed areas. Bio-retention basins allow runoff water to enter into the underlying soil, reducing runoff to storm sewers.

Applicability – Although more involved, bio-retention basins are suitable for most properties and development types. Maintenance of these basins include establishment of vegetation within the basin, regular mowing, and control of invasive species. Proper construction will require professional assistance.

Bluegrass Landscaping & Maintenance http://bluegrasslawn.com/the-importance-of-bioretention-systems/

Stormwater-Friendly Lawn Care

The following are actions homeowners can take to make their lawns stormwater-friendly:

- Reduce or eliminate the use of fertilizers. When it rains, fertilizers and pesticides are swept away by stormwater runoff and deposited into surrounding watersheds. If you choose to use fertilizer, be sure to immediately sweep off any fertilizer that lands on a paved surface. If you choose to use pesticides, apply the minimum amount necessary to accomplish the desired result.
- When applicable, use natural or organic fertilizers. High levels of fertilizer lead to polluted stormwater and increased algae-blooms. A soil test can be completed to help determine the nutrient needs of your lawn.
- Keep grass clippings and leaves on the lawn and out of the street and storm drains. Landscape waste in the street will end up in storm drains, leading to possible drain back-ups and flooding.
- Set lawnmower height to 3 inches or taller. Maintaining a taller grass produces a deeper and more extensive root system which allows for increased nutrient uptake and less lawn runoff volume.
- Use rain gardens or natural landscaping where possible. Rain gardens filled with native plants help absorb and store rain water. Native plants also require less watering and maintenance.
- Use rain barrels to catch and store rainwater during storms and use the stored water to irrigate your lawn at a later time.
- Minimize the non-permeable pavement in your yard to allow stormwater runoff to soak into the ground.

City of Coralville, Iowa http://www.coralville.org/121/Stormwater-Management-Funds

Summary

As outlined in this guide, there are many benefits and advantages to implementing stormwater Best Management Practices on your property. This guide is intended to be a starting point for homeowners interested in creating a stormwater-friendly property. The Best Management Practices outlined in this guide can be implemented at the homeowner-level on almost any property. Stormwater Best Management Practices are meant to impede and direct excess stormwater runoff by natural means while at the same time promote filtering of the water naturally. Slowing stormwater runoff on its trip to storm sewers is beneficial during high-volume storm events. Stormwater mitigation starts at the homeowner level beginning with the Best Management Practices outlined in this guide.

The following BMPs are ranked lowest to highest in terms of cost, complexity and need for professional assistance:

Best Management	Description	Cost and Complexity
Practice		
Rain Barrels &	A water tank used to collect and store rain water runoff directly	Low
Downspouts	from rooftops via downspouts.	
Natural Landscaping	The use of native plants, including trees, shrubs, groundcover,	Medium
	and grasses which are indigenous to the geographic area, and promote greater infiltration.	
Bioswales	Landscape elements designed to channel water so as to slow flow and direct water to other areas.	Medium
Rain Gardens	A planted depression that retains rainwater runoff from impervious areas and allows it to be absorbed and pollutants to be filtered out.	Medium
Permeable Pavement	Sustainable materials, usually block-shaped pieces, which allow the movement of stormwater through the surface and into the underlying ground. This consists of open-work gravel with sufficient void to store water volume.	High
Bio-Retention Basins	Large naturally landscaped areas design to filter stormwater runoff	High

AGENDA

APWA Illinois Chapter; Gateway Branch General Membership Meeting Bella Milano Restaurant, O'Fallon, IL Date: 08/02/2022

President: Jeff Reis Secretary: Troy Turner

Vice President: Brian Schmidt Treasurer: Amanda Dioneda

Past President: Lori Daiber

Directors:

2-yr: Rebecca Tharp, Tim Ahrens, Ryan Zwijack 1-yr: Bob Hotz, Joe Gillespie, Tom Cissell

Introduction of Attendees

Secretary's Report – Approval of Minutes – Troy Turner

Treasurer's Report - Approval of Report - Amanda Dioneda

Old Business - None

New Business

- 1. Illinois Chapter Meeting held July 15th (Virtual)
 - a. Snow Rodeo Cancelled
- 2. Next Illinois Chapter Meeting September 23, 2022 @ 10:00 hosted by the Gateway Branch RP Lumber Center, 6289 Tiger Drive, Edwardsville
- 3. IPSI (Illinois Public Service Institute)
 - a. October 2-7,2022, Effingham IL
 - b. Registration www.ilpsi.org
- 4. 2022 PWX Public Works Expo, August 28-31, 2022, Charlotte, NC
- 5. Annual Chapter Golf Outing Belk Park, September 9th
 - a. 11:00 AM shotgun start
 - b. Sponsorship opportunities remain
 - c. Sign-up by August 19th
 - d. Taking donations for attendance prizes
- 6. Next Meeting of Gateway Branch, December 6th (Bella Milano Edwardsville)

Presentation – Brett Gaither (Byrne and Jones) – "It's not your grandfather's asphalt. What can you do about it?"

Adjournment

AGENDA

APWA Illinois Chapter; Gateway Branch General Membership Meeting – Sponsored by Civil Design, Inc. Bella Milano Restaurant, Edwardsville, IL Date: 02/14/2023

President: Jeff Reis Secretary: Troy Turner Vice President: Brian Schmidt Treasurer: Amanda Dioneda

DEPARTMENT OF THE ARMY

U.S. ARMY CORPS OF ENGINEERS, ST. LOUIS DISTRICT 1222 SPRUCE STREET ST. LOUIS, MISSOURI 63103

January 11, 2023

Operations, Readiness and Regulatory Division Readiness Branch

Dear Flood Preparedness Stakeholder,

Flood Preparedness Workshops with drainage and levee district and emergency management officials will be held in-person at five (5) locations in February and March 2023. Dates and locations are listed below for your local area. If are not able to attend the one in your local area, please feel free to join us at one of the other locations as similar topics will be presented at each. In addition, the 2 March workshop will be accessible via WEBEX (instructions enclosed). All Workshops will be held from 6:30 p.m. to 8:30 p.m.

- 14 February, Jacksonville Visitor and Convention Bureau, 310 E. State St. Jacksonville, Illinois 62650
- 16 February, University of Illinois Extension Office, 901 Illinois Ave, Waterloo, Illinois 62298
- 22 February, Hungate Performing Arts Center, 1190 Old Cap Au Gris Rd, Troy, Missouri 63379
- 28 February, Osage Centre, 1625 N Kingshighway St., Cape Girardeau, Missouri 63701
- 2 March, National Great Rivers Museum, 1 Locks and Dam Way, Alton, Illinois 62002, and via WEBEX (instructions enclosed)

The workshop format is organized around several topics; the National Weather Service (NWS) will present the Spring flood outlook and the St. Louis District will discuss levee safety, flood response and recovery, and other programs of relevance to sponsors. In addition, State, Regional, County, and Local emergency management agencies are expected to participate in the workshops.

This workshop is intended to be an open forum for discussion by all participants. We encourage you to discuss operation and maintenance issues, flood recovery, overall flood preparedness, or any other related topics important to you. We also ask that you provide updated contact information for your levee system, including email addresses, using the enclosed form or via an email that includes the information. This invitation, including the enclosures, was also provided via electronic mail to the email addresses we currently have on file for your organization.

While it is not necessary to RSVP for the workshops, please feel free to contact me at (314) 331-8569 (John.L.Osterhage@usace.army.mil), or Cathy Van Arsdale at (314) 331-8570 (Cathy.VanArsdale@usace.army.mil), for any questions you may have.

Enlcosures

Sincerely,

John L. Osterhage, P.E. Chief, Readiness Branch

MADISON COUNTY TOWNSHIP HIGHWAY COMMISSIONERS ASSOCIATION

June 6, 2022

To: All Highway Commissioners

Re: Meeting Notice

Dear Commissioner,

MEETING-

The Madison County Township Highway Commissioners will meet on **June 10, 2022** – 8:15 A.M. at The Other Place on The Hill in Hamel for breakfast. The meeting will follow beginning at 9:00 A.M. We will have reps from the new oiling company Illiana there introducing themselves.

SINCE THIS IS A BUFFET BREAKFAST-

Please respond by email or call with a number who will be attending for breakfast so we can plan accordingly.

Chad Zobrist 618-781-0054

Creating Solutions Across Jurisdictional Boundaries

AGENDA

AGENDA WATER RESOURCES ADVISORY COMMITTEE Tuesday, February 28, 2023 10:30 AM – 12:00 PM

East-West Gateway Board Room and Virtual

The East-West Gateway Offices are now open to the public. You are welcome to attend this meeting in person or virtually on the GoToMeeting platform.

You can listen, talk, and/or view the meeting via:

Computer - https://meet.goto.com/946261181

Access code: 946-261-181

 CALL TO ORDER - Carol Lawrence, Chair, East-West Gateway Council of Governments

2. DISCUSSION ITEMS

Or Phone - +1 (312) 757-3121

- A. Frontenac's Timber Trail to Briar Ridge Streambank Restoration Project

Keeping Nature Near

2022 Erosion and Sediment Control BMP Training

What can be done to control soil erosion and provide sediment control?

Preventative Action

Numerous studies show that it is more cost effective and institutionally feasiable to develop measures to prevent or reduce pollutants in stormwater during new development than to correct problems caused by these pollutants later

Establish Local Ordinances:

Many counties and municipalities have adopted soil erosion and sediment control ordinances which, when consistently enforced and coordinated with state and federal permit authorities, can be an extremely effective method to minimize damages caused by erosion and sediment

Planning for soil erosion and sediment control should be considered as important as only other component of the development process. Proper Implementation and maintenance of planned practices will assure that costs incurred will be offset by economic, environmental and other benefits.

Let's work together on your property!

SCAN THE QR CODE FOR MORE RESOURCES

Soil is a valuable natural resource that is vital to the maintenance of the natural environment as we know it.

2022 Construction Site Inspector's Training

Stormwater Phase II Final Rule

Post-Construction Runoff Control Minimum Control Measure

This fact sheet profiles the Post-Construction Runoff Control minimum control measure, one of six measures that the operator of a Phase II regulated small municipal separate storm sewer system (MS4) is required to include in its stormwater management program in order to meet the conditions of its National Pollutant Discharge Elimination System (NPDES) permit. This fact sheet outlines the Phase II Final Rule requirements for post-construction runoff control and offers some general guidance on how to satisfy those requirements. It is important to keep in mind that the small MS4 operator has a great deal of flexibility in choosing exactly how to satisfy the minimum control measure requirements.

Why Is The Control of Post-Construction Runoff Necessary?

Post-construction stormwater management in areas undergoing new development or redevelopment is necessary because runoff from these areas has been shown to significantly affect receiving waterbodies. Many studies indicate that prior planning and design for the minimization of pollutants in post-construction stormwater discharges is the most cost-effective approach to stormwater quality management.

There are generally two forms of substantial impacts of post-construction runoff. The first is caused by an increase in the type and quantity of pollutants in stormwater runoff. As runoff flows over areas altered by development, it picks up harmful sediment and chemicals such as oil and grease, pesticides, heavy metals, and nutrients (e.g., nitrogen and phosphorus). These pollutants often become suspended in runoff and are carried to receiving waters, such as lakes, ponds, and streams. Once deposited, these pollutants can enter the food chain through small aquatic life, eventually entering the tissues of fish and humans. The second kind of post-construction runoff impact occurs by increasing the quantity of water delivered to the waterbody during storms. Increased impervious surfaces (e.g., parking lots, driveways, and rooftops) interrupt the natural cycle of gradual percolation of water through vegetation and soil. Instead, water is collected from surfaces such as asphalt and concrete and routed to drainage systems where large volumes of runoff quickly flow to the nearest receiving water. The effects of this process include streambank scouring and downstream flooding, which often lead to a loss of aquatic life and damage to property.

What Is Required?

The Phase II Final Rule requires an operator of a regulated small MS4 to develop, implement, and enforce a program to reduce pollutants in post-construction runoff to their MS4 from new development and redevelopment projects that result in the land disturbance of greater than or equal to 1 acre. The small MS4 operator is required to:

- Develop and implement strategies which include a combination of structural and/or nonstructural best management practices (BMPs);
- ☐ Have an ordinance or other regulatory mechanism requiring the implementation of postconstruction runoff controls to the extent allowable under State, Tribal or local law;

Industrial "No Exposure"

4.0 - Conditional No Exposure Exclusion for Industrial Activity

- Ensure adequate long-term operation and maintenance of controls:
- Determine the appropriate best management practices and measurable goals for this minimum control measure.

What Is Considered a "Redevelopment" Project?

The Phase II Final Rule applies to "redevelopment" projects that alter the "footprint" of an existing site or building in such a way that there is a disturbance of equal to or greater than 1 acre of land. Redevelopment projects do not include such activities as exterior remodeling. Because redevelopment projects may have site constraints not found on new development sites, the Phase II Final Rule provides flexibility for implementing post-construction controls on redevelopment sites that consider these constraints.

What Are Some Guidelines for Developing and Implementing This Measure?

This section includes some non-structural and structural BMPs that could be used to satisfy the requirements of the post-construction runoff control minimum measure. It is important to recognize that many BMPs are climate-specific, and not all BMPs are appropriate in every geographic area. Because the requirements of this measure are closely tied to the requirements of the construction site runoff control minimum measure (see Fact Sheet 2.6), EPA recommends that small MS4 operators develop and implement these two measures in tandem.

☐ Non-Structural BMPs

- Planning Procedures. Runoff problems can be addressed efficiently with sound planning procedures. Local master plans, comprehensive plans, and zoning ordinances can promote improved water quality in many ways, such as guiding the growth of a community away from sensitive areas to areas that can support it without compromising water quality.
- Site-Based BMPs. These BMPs can include buffer strip and riparian zone preservation, minimization of disturbance and imperviousness, and maximization of open space.

☐ Structural BMPs

• Stormwater Retention/Detention BMPs. Retention or detention BMPs control stormwater by gathering runoff in wet ponds, dry basins, or multichamber catch basins and slowly releasing it to receiving waters or drainage systems. These practices can be designed to both control stormwater volume and settle out particulates for pollutant removal.

- Infiltration BMPs. Infiltration BMPs are designed to facilitate the percolation of runoff through the soil to ground water, and, thereby, result in reduced stormwater runoff quantity and reduced mobilization of pollutants. Examples include infiltration basins/trenches, dry wells, and porous pavement.
- Vegetative BMPs. Vegetative BMPs are landscaping features that, with optimal design and good soil conditions, remove pollutants, and facilitate percolation of runoff, thereby maintaining natural site hydrology, promoting healthier habitats, and increasing aesthetic appeal. Examples include grassy swales, filter strips, artificial wetlands, and rain gardens.

What Are Appropriate Measurable Goals?

Measurable goals, which are required for each minimum control measure, are intended to gauge permit compliance and program effectiveness. The measurable goals, as well as the BMPs, should reflect needs and characteristics of the operator and the area served by its small MS4. Furthermore, the measurable goals should be chosen using an integrated approach that fully addresses the requirements and intent of the minimum control measure.

EPA has developed a Measurable Goals Guidance for Phase II MS4s that is designed to help program managers comply with the requirement to develop measurable goals. The guidance presents an approach for MS4 operators to develop measurable goals as part of their stormwater management plan. For example, an MS4 program goal might be to reduce by 30 percent the road surface areas directly connected to storm sewer systems (using traditional curb and gutter infrastructure) in new developments and redevelopment areas over the course of the first permit term. Using "softer" stormwater conveyance approaches, such as grassy swales, will increase infiltration and decrease the volume and velocity of runoff leaving development sites. Progress toward the goal could be measured by tracking the linear feet of curb and gutter not installed in development projects that historically would have been used.

IAFSM 2023 Annual Conference

2023 Annual Conference

Tuesday & Wednesday March 14 & 15, 2023

Tinley Park Convention Center Tinley Park, Illinois

Questions: Sarah Harbaugh IAFSM Executive Secretary iafsm@illinoisfloods.org or 630/443-8145 www.lllinoisFloods.org

LOCATION AND LODGING

Location: The conference is at the Tinley Park Convention Center 18451 Convention Center Dr, Tinley Park, IL 60477, http://www.evenhotels.com/chitinleypark.

Lodging: A special conference rate of \$145 plus tax, for a standard room, per night, has been established at the Even Hotel. Guests can book a room at our conference rate in one of the following ways:

- By calling the front desk at 708-444-1100 and referencing the IAFSM Conference, or group code AFS
- By going on their website http://www.evenhotels.com/chitinleypark, entering your stay dates & group code AFS.

If you are requesting a state/government rate you will need to contact the hotel directly. they typically have a limited number of those rooms so make your reservation early.

Registration: Registration covers lunches, breaks, materials and your 2023-2024 IAFSM membership. **Discount on or before February 10, 2023 (\$430).** If you register after February 10th the cost for the conference is \$490. The deadline for registrations and cancellations is February 24, 2023.

Please follow the link below to register on-line.

https://www.illinoisfloods.org/meetings/register/options/1026

EXHIBITORS & SPONSORS

Exhibitors: Companies and organizations will exhibit their products, services, and activities all day Tuesday and through the Tuesday evening social hour. Exhibitor cards can be completed by participants. Wednesday during lunch there will be a drawing of returned completed cards to select door prize winners.

Sponsors: We invite you to be a sponsor for the annual conference or donate a door prize. All sponsors will be identified in the conference program, at plenary sessions and during the awards luncheon along with newsletter advertising benefits. For a complete listing of Sponsor benefits please contact Sarah at IAFSM@illinoisfloods.org.

	On or before Feb 10	After Feb 10, thru Feb 24
Exhibitor Fee	\$800	\$900
Registration Fee	\$430	\$490
Full Time Student Registration Fee (2 day conference) Student must be enrolled in at least 6 credit hours to qualify for this rate.	\$75	\$75

COMMUNITY RATING SYSTEM (CRS)

CRS: Lou Ann Patellaro, ISO will be exhibiting this year. If you are interested in the CRS or have questions, please visit her at her booth in the exhibitor hall.

CEC's & PDH's

Certified Floodplain Managers – CECs:

10 Continuing Education Credits are provided toward the requirements for Certified Floodplain Managers for attending both days of the conference. Attendance is reported directly to the CFM Database.

Professional Engineering - PDHs: Full conference attendance provides 12 Professional Development Hours. Certificates can be picked up at the end of the conference.

Credit hours are subject to final program adjustment.

MOBILE APP

We will once again have a mobile app for the conference. Stay tuned for more details as the conference date gets closer.

SILENT AUCTION

This year at the Illinois Association for Floodplain and Stormwater Management conference a silent auction to be held. All proceeds from the silent auction will go towards the Association of State Floodplain Managers Foundation (ASFPM) Future Leaders Scholarship fund (<u>ASFPM Foundation</u>). Supporting of Future Leaders is imperative and The ASFPM Foundation Future Leaders Scholarship has been established to provide financial support, mentoring and professional opportunities to undergraduate students who will grow to advance the vision of the ASFPM Foundation. If you or your organization are able to donate something please contact Dallas Alley (<u>alley@cofh.org</u>) so that he can coordinate logistics with you.

Tuesday, March 14, 2023

8:00 am

Registration

Exhibits and continental breakfast - Exhibitor hall

8:00 – 9:00 am Young Professionals Meet-and-Greet Table (designated table in Exhibit South)

9:00 am

Plenary Session

- Welcome
- Dr. John Foley, Project Drawdown

10:10 am

Break - Exhibitor Hall

10:30 am

Concurrent Session 1

1A Floodplain Management

- How to Calculate Structural Flood Damages
- The Multiple Benefits of Floodplain Easements: An Assessment of Demand for Floodplain Easements in the Upper Mississippi River Basin
- Multi-Benefit Floodplain Development in Illinois? A Workshop for the Private Sector

1B Urban Flooding

- ❖ An Urban Flooding Case Study: The Village of Bedford Park
- Reducing Urban Flooding in Oak Lawn
- South Shore Community Resilience Plan: A New Model for Shoreline Resiliency

1C Stormwater Management

- Value Engineering and Strategic Timing to Move Forward with a Gully Erosion and Stormwater Project
- The School Springs Mitigation and Restoration
- Replacement of the Nettle Creek Agueduct

1D Riverine Flooding

- From Modeled to Mapped: How to Delineate a Floodplain
- Fullersburg Dam Removal & Salt Creek Restoration
- Stratton-Bolger Lock & Dam Project: The Engineering & Construction of a Key Water Control Structure for Illinois

12:00 pm

Lunch

TBD

1:30 pm

Concurrent Session 2

2A Green Infrastructure

- Green Infrastructure Guidelines for Transportation Projects
- Pre-Vegetated Blankets: Providing Erosion Control While Preserving the Integrity, Stability & Beauty of the Native Plant Community
- ❖ Alternative Procurement Strategies for Green Infrastructure

2B Stormwater Management

- City of Wood Dale Ward 2 & 3 Stormwater Improvements
- Kenilworth Green Streets Phase II.
- What's in a Distribution? A Comparison of Stormwater Ordinances

2C Climate Change

- South Florida's Response to Predicted Sea Level Rise
- Resources for Equitable Flood Resilience

Flood Resilient Infrastructure and Regulatory Requirements in a Changing Climate

2D Flood Insurance/Community Rating System

- Community Rating System (CRS) Program Credits and Activities
- RR 2.0 Top Myths & Facts Helping Floodplain Mangers Better Understand Risk Rating 2.0
- Update of Silver Jackets Projects

1:45 – 4:45pm Field Trip - Construction of Addison Creek Reservoir

3:00 pm Break - Exhibitor Hall

3:20 pm Concurrent Session 3

3A Floodplain Management

- ❖ IDNR Office of Water Resources Permit Program for NE Illinois
- Floodplain Management The Basics (1 Hour Session)

3B Stormwater Management

- Impacts of Watershed Specific Release Rates on Disproportionately Impacted Communities in Cook County
- St. Peters, MO Willott Road
- The Fresh Coast Protection Partnership- Green Infrastructure Implementation in the Milwaukee Metropolitan Region

3C Modeling/Regulations

- Value Added 3D Modeling Eagle Creek Flood Risk Reduction Project
- ❖ IAFSM Recommendations for H&H Modeling

•

3D Legislation

❖ IAFSM Legislation Committee Workshop (90-minute Session)

4:50 -6:30 pm Social Hour - Exhibitor Hall

6:30 -7:30 pm Young Professionals After-Hours

Wednesday, March 15, 2023

7:30 am IAFSM Board Meeting

Registration & Continental Breakfast

7:30 - 9:00 am Young Professionals Meet-and-Greet Table (designated table in Exhibit South)

9:00 am Plenary Session

Erica Gies, Author of Water Always Wins: Thriving in an age of drought and deluge.

10:10 am Break

10:30 am Concurrent Session 4

4A Wetlands

- Joint Permitting What Should be in your USACE Submittal
- Urban Stream and Wetland Restoration Lessons from Heritage Park on Buffalo Creek, Buffalo Grove, IL
- The Wild Mile
- 4B Urban Flooding

- Developing an Urban Flood Detection and Warning Network Using Low-Cost, Low-Power Sensors
- Landslide Mitigation Project
- 2-Stage Ditch Project in Dyer, IN

4C Stormwater Management/Water Quality

- Wilmette Stormwater Action Plan Planning and Implementation of the Largest Capital Project in the Village's History
- ❖ Alternative Approach to Native Maintenance Program Management
- BMPs to Control Peoria Combined Sewer Overflows (CSOs)

4D Rainfall Technical Analysis

- What shape is your rain? A case study of precipitation distributions.
- New At-Streamgage Quantiles and Regression Equations for Estimating Peak-Flow Quantiles in Illinois
- The Effect of Urbanization on the Stationarity of Peak Flows in Illinois

12:00 pm Lunch

- Awards Luncheon
- Vendor Door Prizes

1:30 pm Concurrent Session 5

5A Stormwater Management

- Volume Control: Alternatives to Infiltration
- Infrastructure Investments in Lake County Part 1: The Unofficial Guide to Getting Grants
- Mahoney Creek Watershed Planning and Project Implementation: Batavia, IL

5B Floodplain Management

- How to Complete a Substantial Damage/Substantial Improvement Evaluations
- LOMR-F: What is Reasonably Safe from Flooding?
- LOMR Common Application Issues and Community Sign Off Considerations

5C Stormwater Managment

FEQ for the Municipal/Review Engineer (90-Minute Session)

5D Outreach

- Building Inclusive Partnerships Through Effective Outreach and Engagement
- Life Lessons from a Major Golf Course Renovation on an Existing Landfill
- •

1:45 – 4:45pm Field Trip - Lake Lorin Shore Stabilization and Habitat Restoration

3:00 pm Adjourn

Illinois Association for Floodplain and Stormwater Management

Certificate of Training

Gabrielle B. Reed has satisfactorily completed training during the

2023 IAFSM Annual Conference

Conducted by

The Illinois Association for Floodplain and Stormwater Management

Location: Tinley Park, Illinois Date: March 14th and 15th, 2023

PDH Credits: 11 CEC Credits: 10

Down & Bridgest

Diane Bouckaert, PE, CFM, CPESC Chair, Education Outreach Committee
